

# INFORMATION TECHNOLOGIES FOR SHIFT TO RAIL

## D7.10 Development Readiness Review Pack

### Conceptual Interface Specifications (CIS) iteration 2

Due date of deliverable: 30/11/2017

Actual submission date: 14/11/2018

Leader of this Deliverable: Thales

Reviewed: Y

Document status		
Revision	Date	Description
1	07/05/2018	First draft
2	29/06/2018	Second version
3	01/07/2017	New version based on iteration 1
4	25/10/2017	Update data models and interfaces with FREL content
5	23/05/2018	WP1 interfaces added THP revision
6	21/06/2018	Updated version
7	18/07/2018	Updated version
8	23/07/2018	Final Version after TMC approval and Quality check
9	14/11/2018	Final version after Final IT2Rai review meeting

Project funded from the European Union's Horizon 2020 research and innovation program		
Dissemination Level		
<b>PU</b>	Public	X
<b>CO</b>	Confidential, restricted under conditions set out in Model Grant Agreement	
<b>CI</b>	Classified, information as referred to in Commission Decision 2001/844/EC	

Start date of project: 01/05/2015

Duration: 36 months

## **EXECUTIVE SUMMARY**

---

This document aims at providing a high level, simple and comprehensive idea of the exchanges between the IT2Rail services. Describing the data models used by each functional area to perform these exchanges and as well providing detailed information about the interfaces used by those functional areas.

## TABLE OF CONTENTS

Executive Summary .....	2
List of Figures .....	5
List of Interfaces .....	6
List of Abbreviations.....	8
1. Preface .....	9
1.1 Purpose of this document.....	9
1.2 Associated documents .....	9
1.3 Document Conventions .....	9
2. Overview .....	10
3. Data Models.....	14
3.1 Interoperability Framework.....	14
3.1.1 Description .....	14
3.1.2 Data Model .....	14
3.2 Travel Shopping .....	20
3.2.1 Description .....	20
3.2.2 Data Model .....	20
3.3 Booking and Ticketing.....	25
3.3.1 Description .....	25
3.3.2 Data Model .....	25
3.4 Trip Tracking.....	31
3.4.1 Description .....	31
3.4.2 Data Model .....	31
3.5 Travel Companion.....	42
3.5.1 Description .....	42
3.5.2 Data Model .....	42
3.6 Business Analytics .....	44
3.6.1 Description .....	44
3.6.2 Data Model .....	44
4. Interfaces .....	47
4.1 General overview .....	47
4.2 Interfaces in Detail .....	48
4.2.1 Interoperable Framework interfaces .....	48
4.2.2 Travel Shopping interfaces .....	56
4.2.3 Booking & Ticketing interfaces.....	63

4.2.4	Trip Tracker interfaces .....	87
4.2.5	Travel Companion interfaces .....	93
4.2.6	Business Analytics interfaces .....	102
4.2.7	Interface provided by Business Analytics .....	111

UML	Unified Modeling Language
-----	---------------------------

---

## 1. PREFACE

---

### 1.1 PURPOSE OF THIS DOCUMENT

This document provides the “Conceptual Interface Specification” (CIS) for the project. It summarises all interfaces identified and documented for each service provided by the IT2Rail Pilot. This document is a foundation to ensure the overall consistency of the development and shall guarantee the interoperability and openness of the design. It will be documented iteratively and shall be used as the reference specification of interfaces.

---

### 1.2 ASSOCIATED DOCUMENTS

Document Name	Reference
D7.2 - Development Readiness Review Pack	ITR-T7.2-E-THA-003

---

### 1.3 DOCUMENT CONVENTIONS

In order to model an abstract view of the tool, this document uses the UML notation (use case, sequence and activity diagrams).

## 2. OVERVIEW

---

This document is part of an update of the deliverable “D7.10 - Development Readiness Review Pack (FREL)”, that was prepared to be delivered on FREL phase. On this new version it includes all the updates that were designed during AREL and FREL phases.

The document is focused on the description of exchanges between different functional areas of the project and is divided into two main parts:

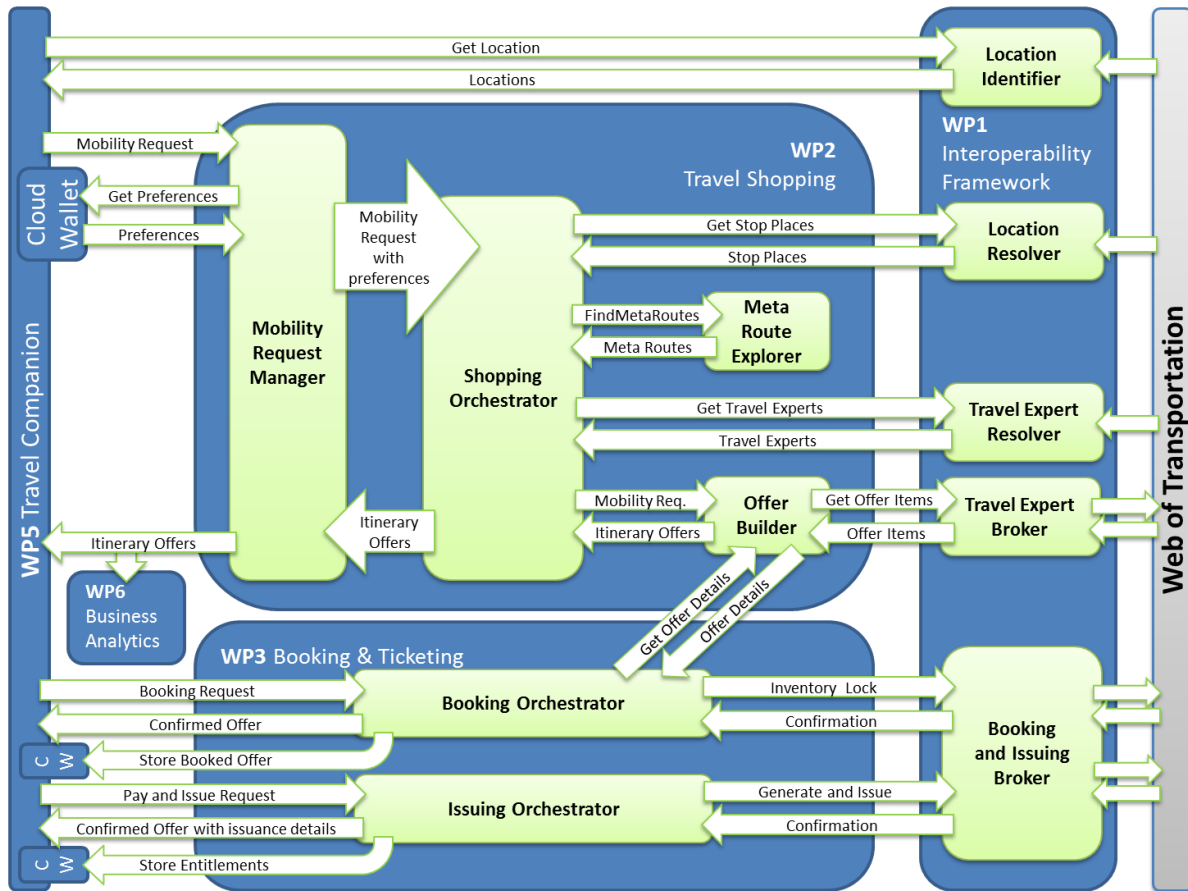

1. Description of the data models;
2. Description of the Interfaces.

Within the whole system several interfaces have to be defined as base for any kind of interaction between the different functional areas of the system as there are:

- a. Interoperability Framework;
- b. Travel Shopper;
- c. Booking & Ticketing;
- d. Travel Companion;
- e. Trip Tracker;
- f. Business Analytics.

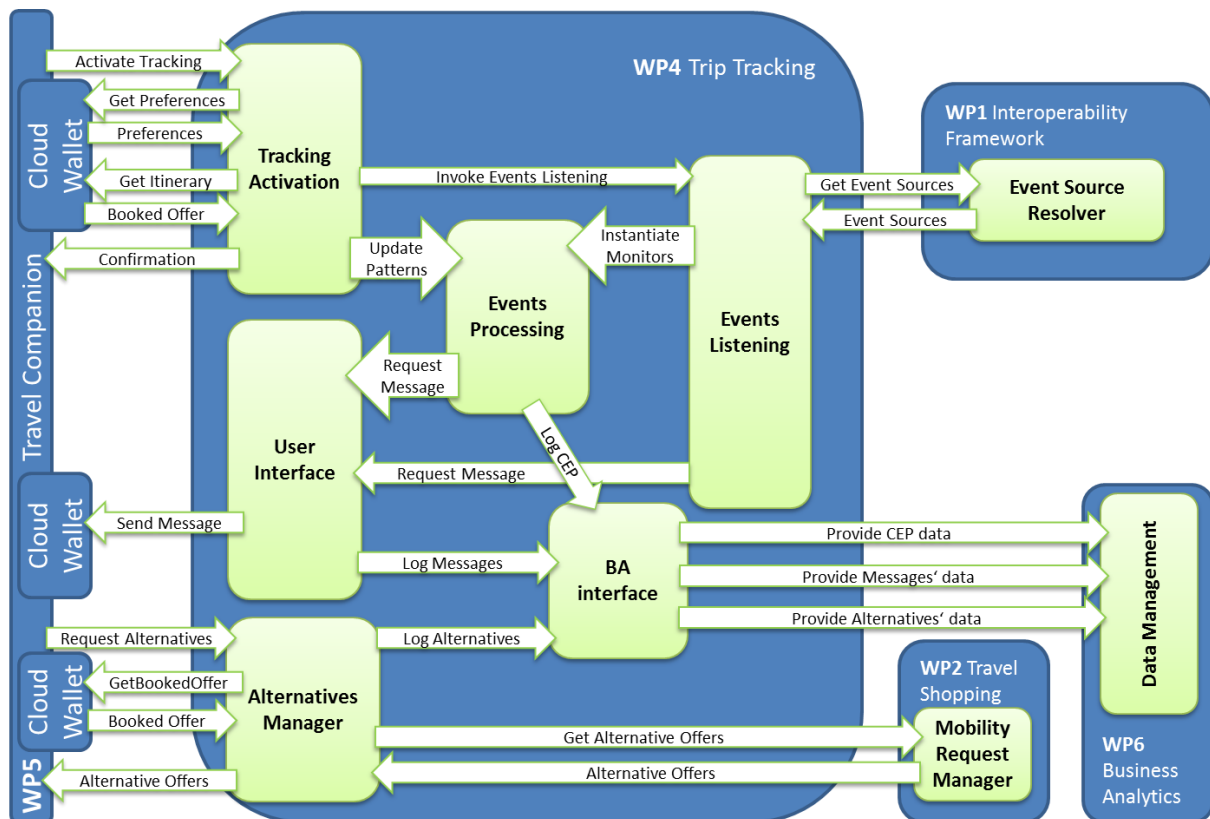

On the diagrams below (Figure 1, Figure 2 and Figure 3) it's possible to have a high-level overview of the interaction between different components and it's visible the high number of exchanges between the different areas.

Certainly, there are interfaces in both directions of a link between functionalities. Therefore, each of the six functional areas has its own chapter, the containing the details of the functionalities that can be called.

**Figure 1: Shopping, booking and ticketing exchanges**

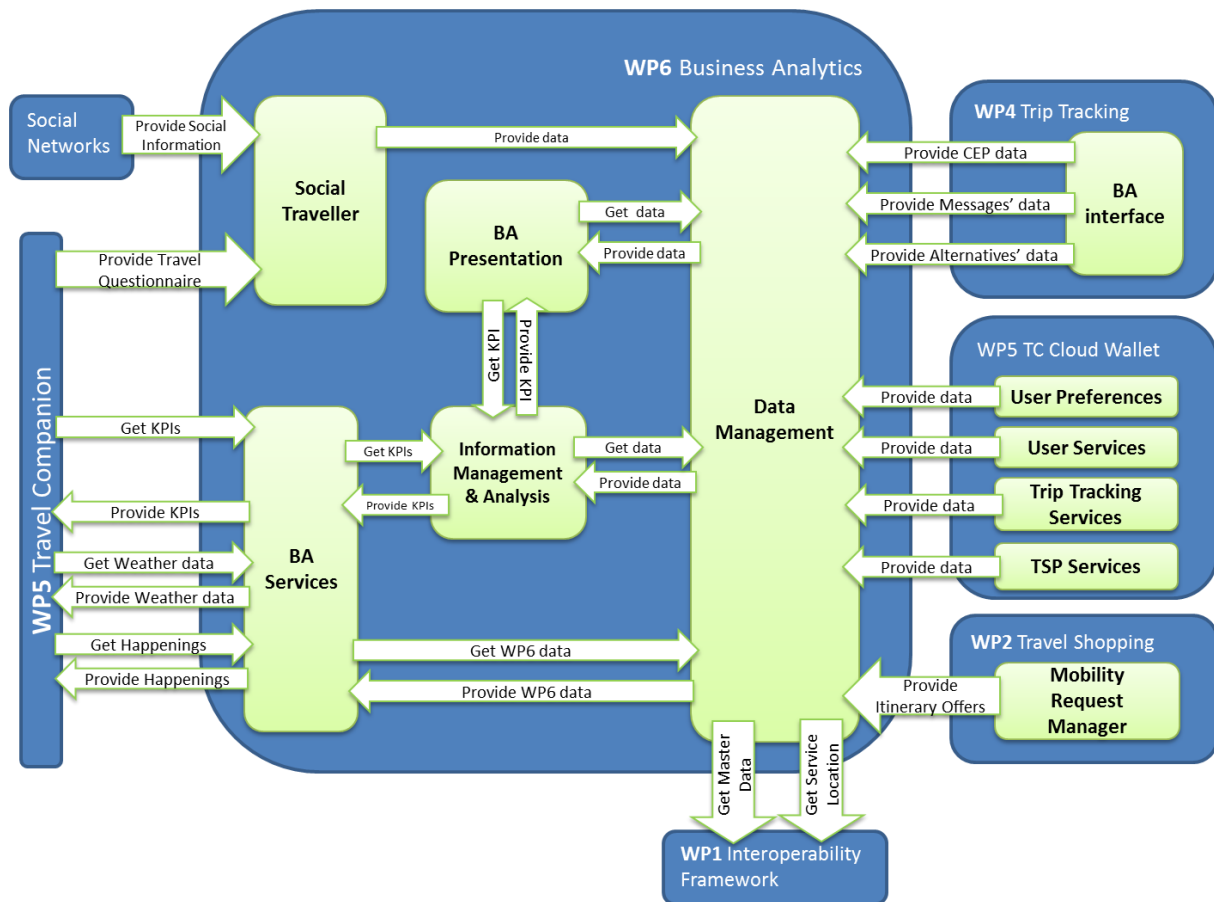

This figure represent the entire flow to acquired entitlements to perform trip, starting from the traveller interaction with the traveller companion to search for location, till the last step of getting the entitlements stored on the cloud wallet.

**Figure 2: Trip tracking exchanges**

This figure represents different flows concerning the trip tracking functionalities:

- The tracking activation triggered by the traveller at the travel companion;
- The events listening performed by monitors when invoked;
- The processing of events that triggers messages to the traveller;
- The request for alternatives raised by the traveller upon trip disruption and handled by the alternatives manager;
- Logging data for business analytics data management

**Figure 3: Business analytics exchanges**

On Figure 3 it is represented all the flows to collect and made available the data handled by the Business Analytics functional area.

## 3. DATA MODELS

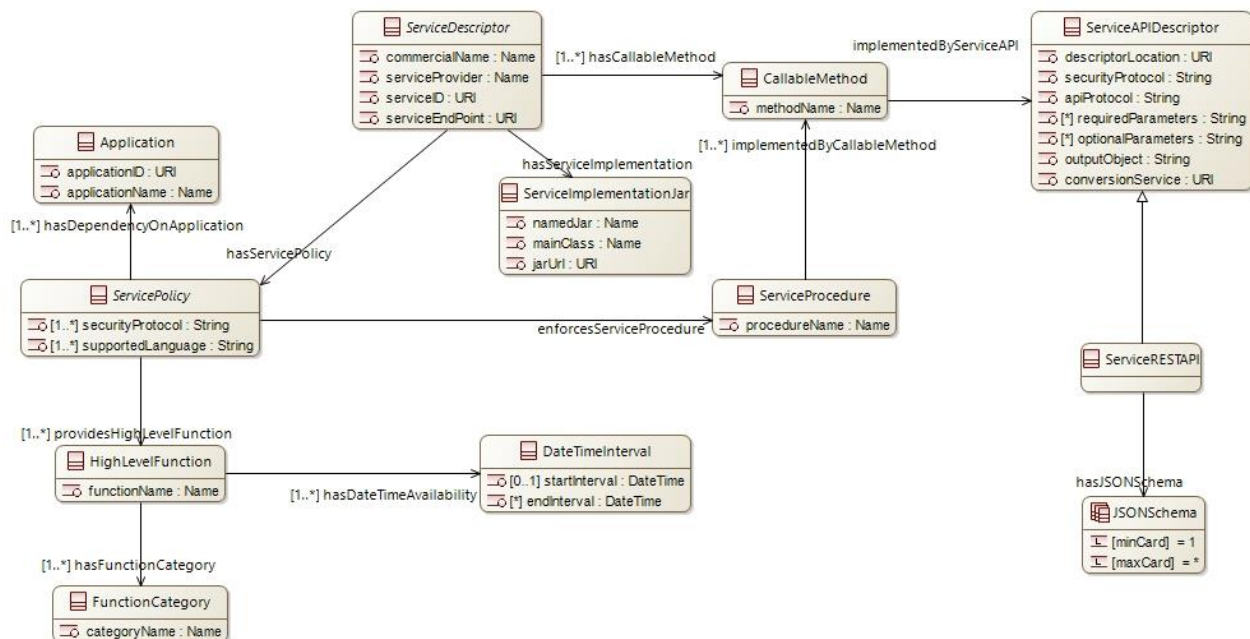

### 3.1 INTEROPERABILITY FRAMEWORK

#### 3.1.1 Description

The Interoperability Framework provides a set of web services, collectively known as “Packaged Resolvers”, to the Travel Companion, the Shopping, Booking and Ticketing, and the Trip Tracker applications. Their purpose is to insulate those applications from the “mechanics” of interoperability across heterogeneous and distributed resources available at Travel Service Providers and over the world wide web, i.e. the “web of transport data”. The “Packaged Resolvers” use a common underlying framework that handles semantic interoperability and is controlled by inference rules and configuration information stored in the Interoperability Framework’s Asset Manager. In this section the high level model of input and output data entities associated with the Packaged Resolvers web services are described, as they constitute the exchange items that implement functional exchanges with the Travel Companion, the Shopping, Booking and Ticketing, and the Trip Tracker applications. A full description of the Interoperability Framework, including the Asset Manager, is provided in other Work Package 1 deliverables of the IT2Rail project.

#### 3.1.2 Data Model

##### 3.1.2.1 Service Descriptor

**Figure 4: [CDB]L IF Semantic Web Service registry**

The Service Descriptor is an abstract class that represents a generic external service provided by a Travel Service Provider. This entity is “published” in the IF Semantic Web Service manager by a Travel Service Provider advertising the service it provides to the ecosystem

### 3.1.2.2 Travel Expert

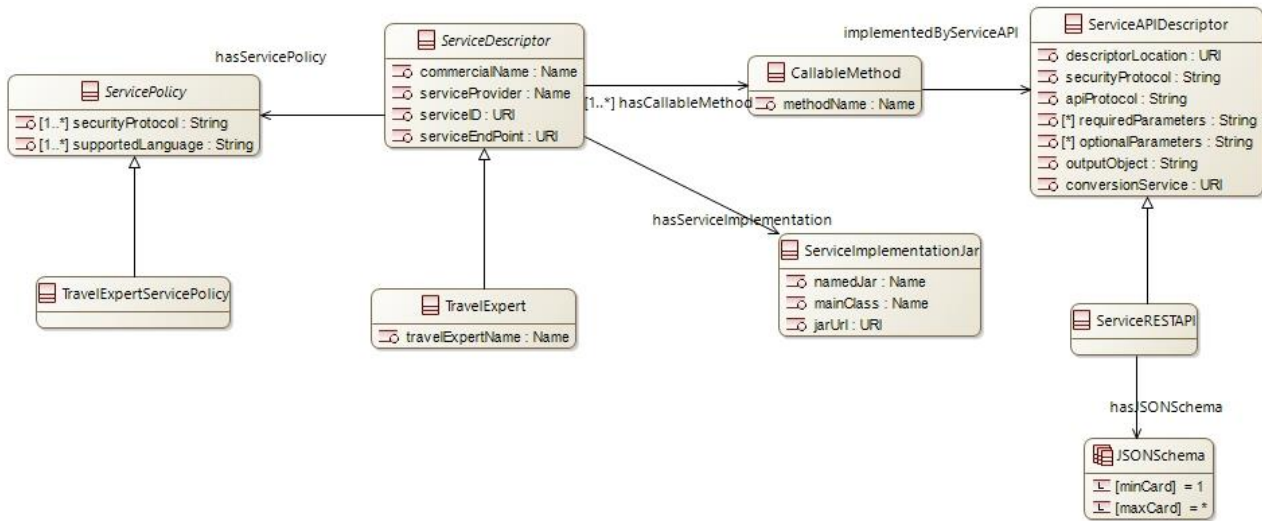

Figure 5: [CBD]L IF Travel Expert

The Travel Expert is a concrete implementation of the Service Descriptor class that represents a Travel Expert or a Booking Engine service in the IT2Rail project.

### 3.1.2.3 Location Identification

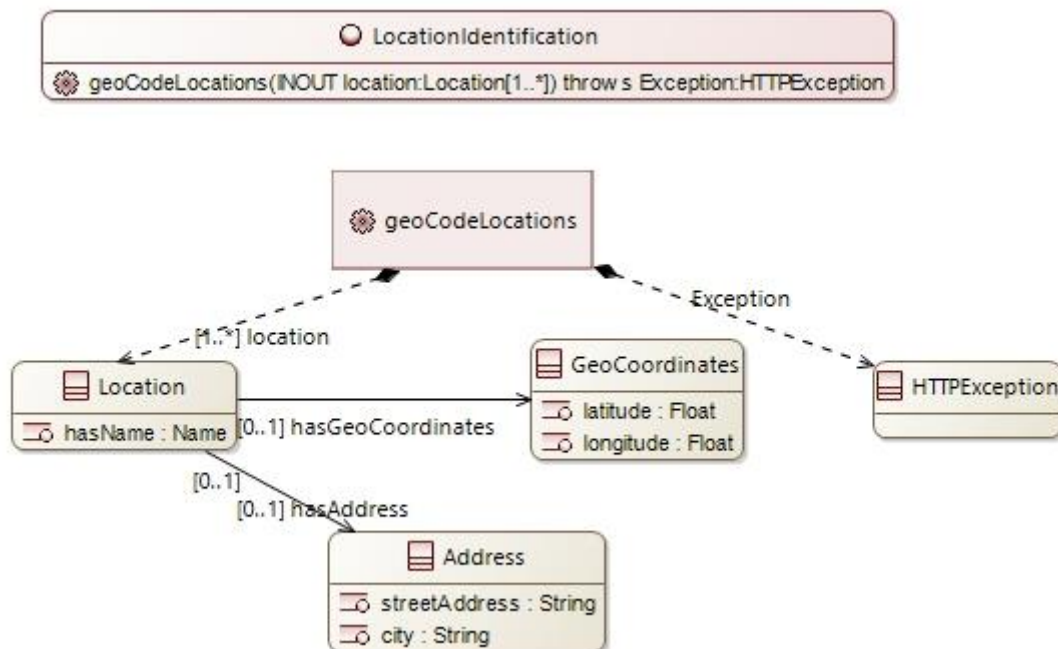

Figure 6: [CDB]L IF Location Identification EI

The geoCodeLocation operation of the Location Identification web service has one or more Location entities as input and returns a list of Locations with their associated Address and GeoCoordinates

### 3.1.2.4 Location Resolver

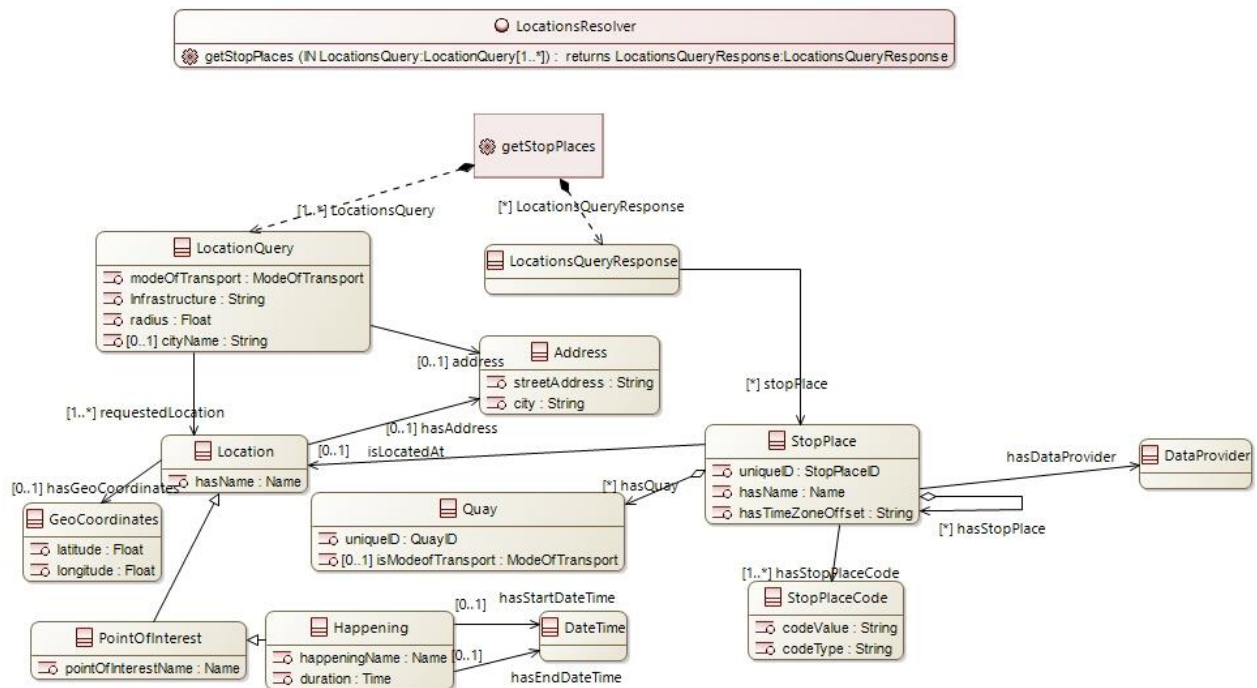

Figure 7: [CDB]L IF Location Query EI

The `getStopPlaces` operation of the Location Resolver web service has one or more `LocationQuery` entities as input and returns a `LocationsQueryResponse` containing a list of `StopPlace`

### 3.1.2.5 Travel Expert Resolver

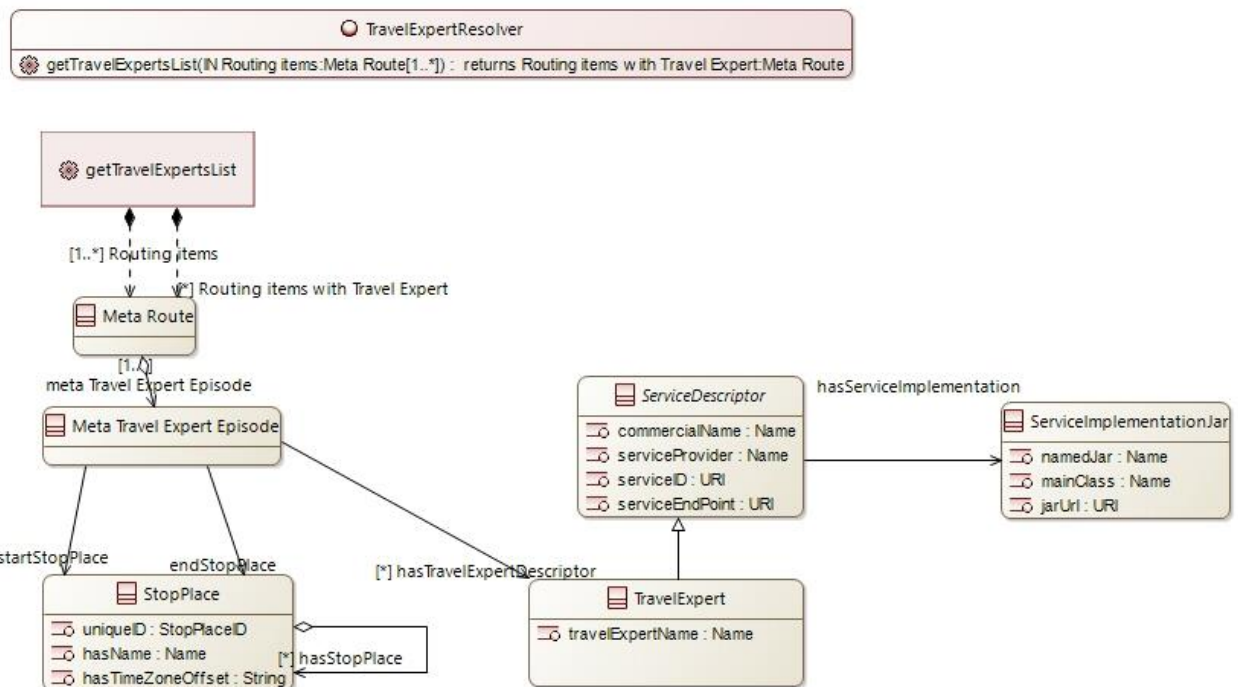

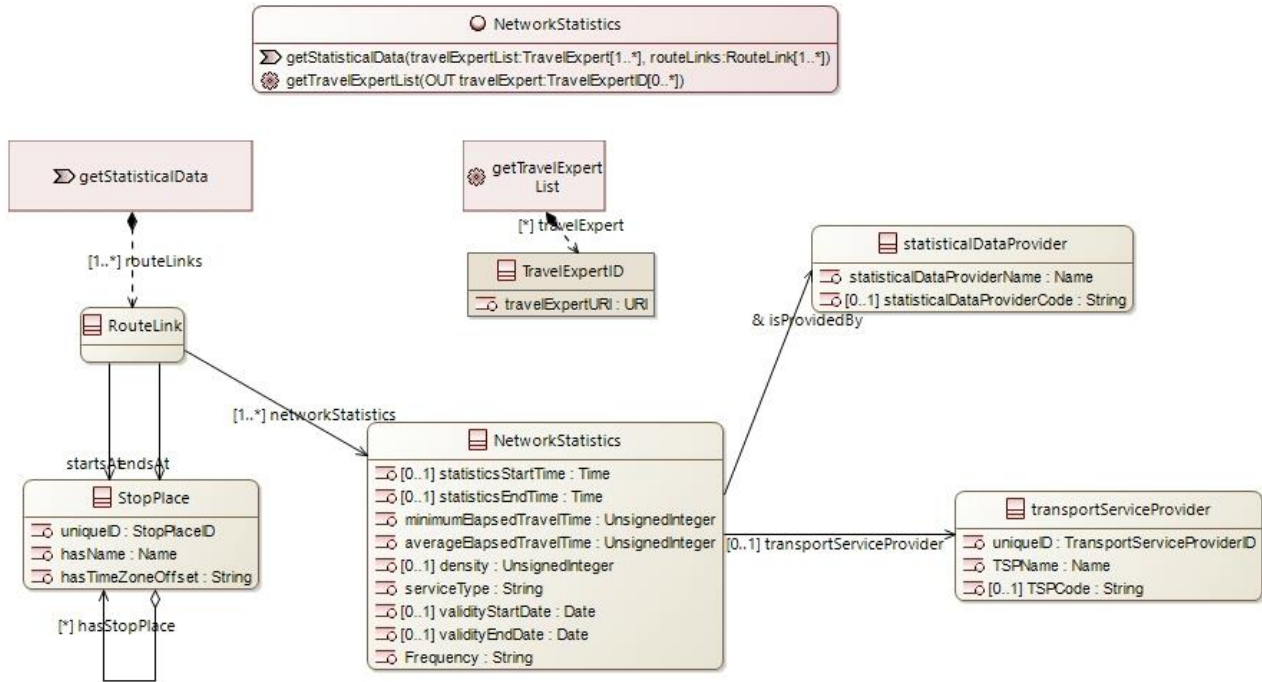

Figure 8: [CBD]L IF Travel Expert Query EI

The `getTravelExpertsList` operation of the Travel Expert Resolver web service has one or more `MetaRoute` entities as input and returns a Meta Travel Expert Episodes associated with their respective Travel Expert service descriptor

### 3.1.2.6 Network Statistics Provider

**Figure 9: [CDB]L Shopping - Statistical Data For Meta Route Explorer**

The `getStatisticalData` operation of the NetworkStatistic web service has one or more `RouteLink` entities as input and returns a list of `RouteLink` associated with their respective `NetworkStatistics`. The `getTravelExpertsList` operation of the NetworkStatistic web service has no input and returns a list of all Travel Expert ids available in the Semantic Web Services registry.

### 3.1.2.7 Navitia Decoder

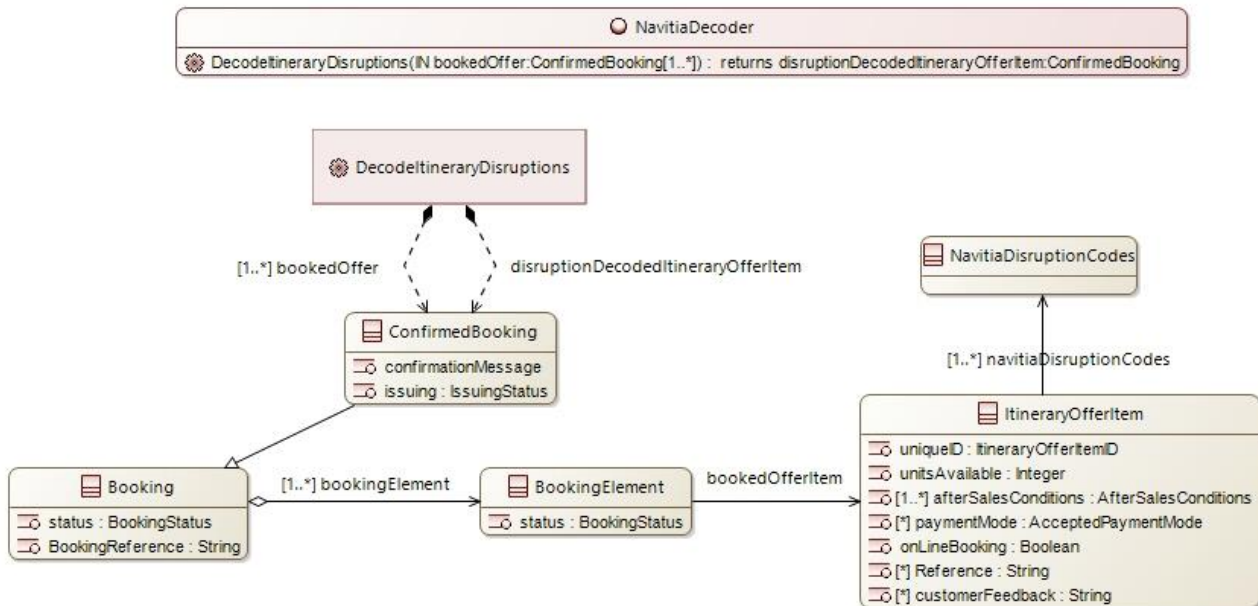

Figure 10: [CDB]L IF Disruption Navitia Decode EI

The DecodeltineraryDisruptions operation of the NavitiaDecoder web service has one or more ConfirmedBooking entities as input and returns a list of ConfirmedBooking associated with the NavitiaDisruptionCodes of the ItineraryOfferItems in the ConfirmedBooking's BookingElements

### 3.1.2.8 Travel Expert Broker

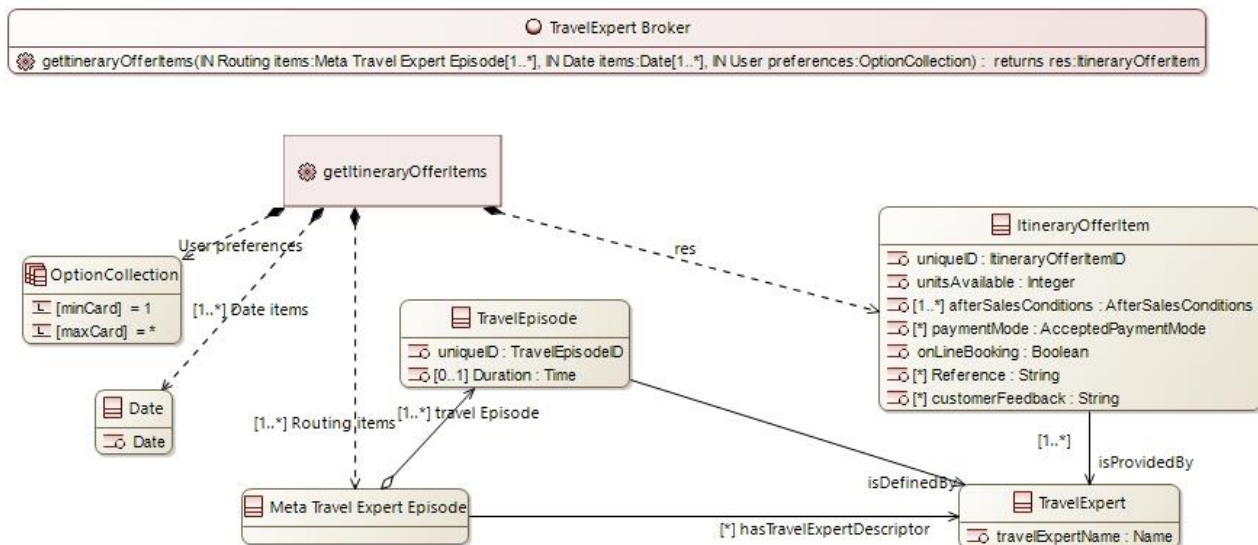

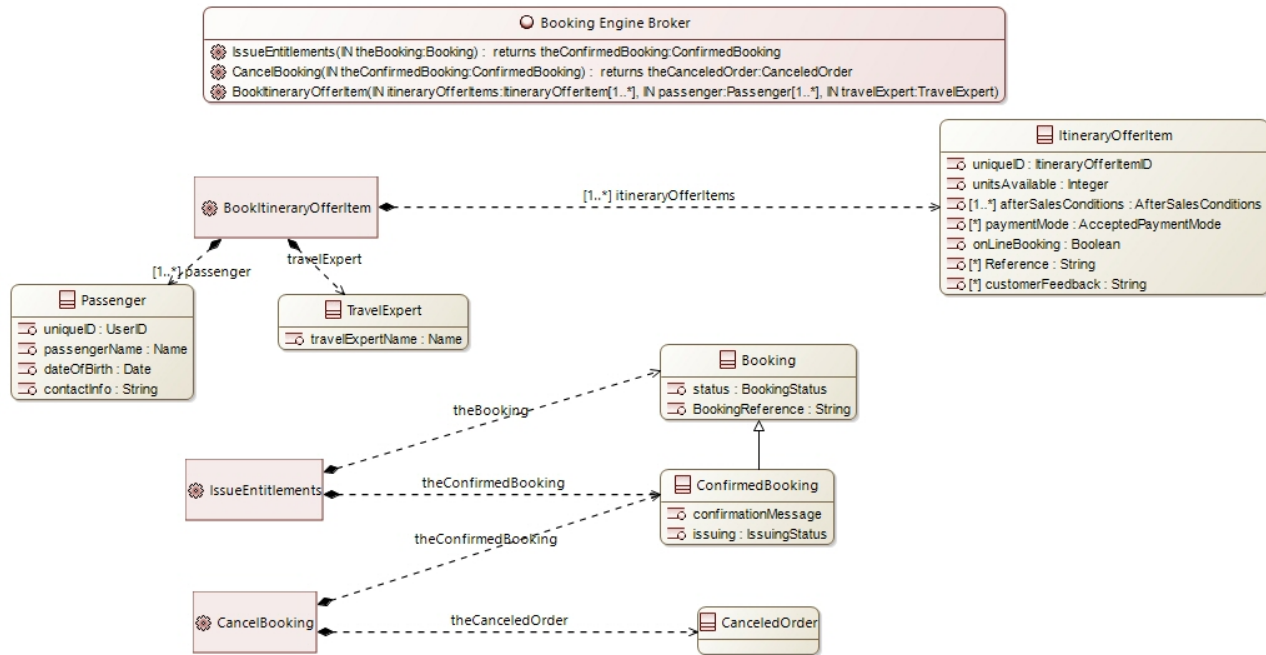

Figure 11: [CDB]L IF Travel Expert Broker EI

The getItineraryOfferItems operation of the Travel Expert Broker web service has one or more User Preferences, Meta Travel Episode and Date Items entities as input and returns a list of ItineraryOfferItems as output

### 3.1.2.9 Booking Engine Broker

**Figure 12: [CDB]L IF Booking Broker EI**

The BookItineraryOfferItem operation of the Booking Engine Broker web service has one Travel Expert, or more Passengers and one or more ItineraryOfferItems entities as input and returns a Booking.

The IssueEntitlement operation of the Booking Engine Broker web service has one Booking entity as input and returns a ConfirmedBooking

The CancelBooking operation of the Booking Engine Broker web service has one ConfirmedBooking entity as input and returns a CanceledOrder

## 3.2 TRAVEL SHOPPING

### 3.2.1 Description

The following chapter is describing the data organization and structure from the Shopping point of view. These elements are used in the interface definition of the Shopping components. Such elements may be reused and details may be added from other functional area point of view.

### 3.2.2 Data Model

#### 3.2.2.1 Overview of the Mobility Request data model

This high-level class diagram shows the main classes and their relationships concerning the Mobility Request class model.

Some class attributes aim at clarifying the contents and use of the class.

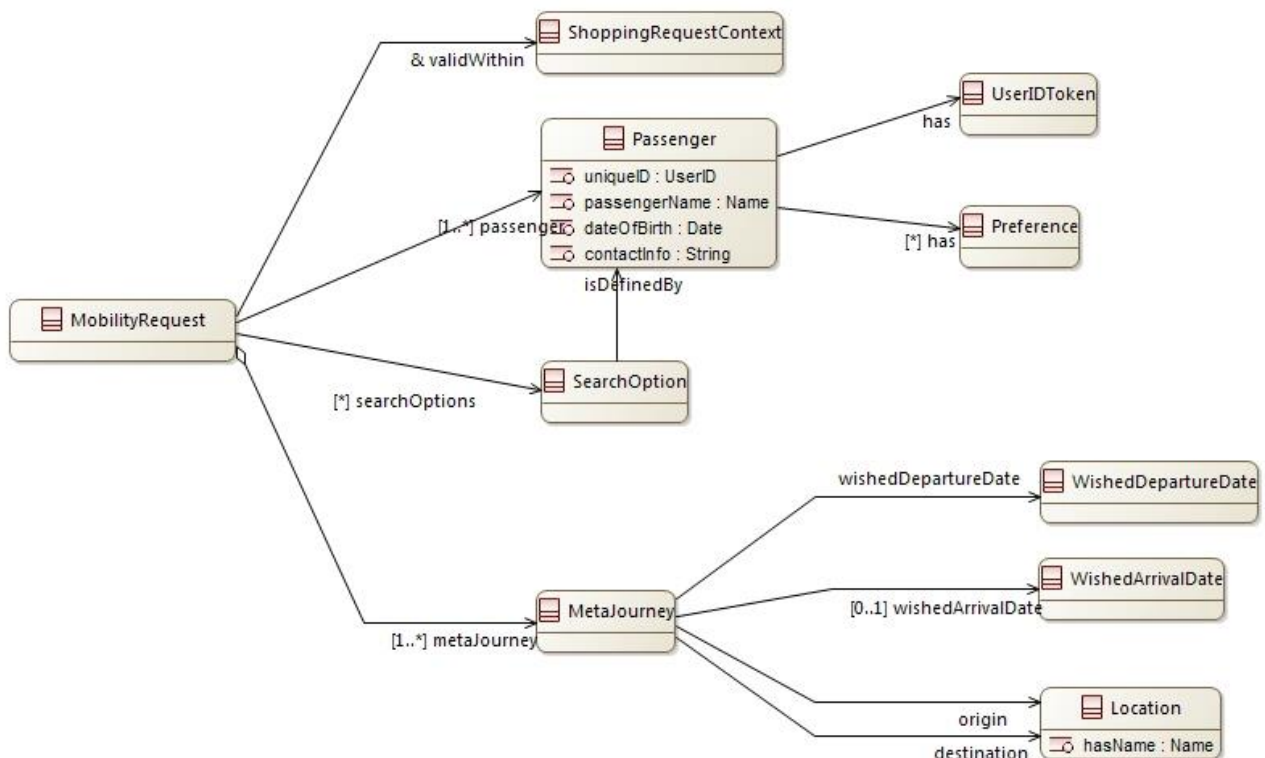

Figure 13: Mobility Request data model

This data model shows the organization of the Mobility Request in IT2Rail.

The Mobility Request contains the following items:

- Some location items: these elements correspond to the origin and the destinations of the Meta Journey, which are specified by the user in the Mobility Request;
- Some dates: the dates correspond to the moment when the user wants to start and/or finish his trips;
- Some preferences: the Mobility Request contains the set of one-time preferences, which are specified by the user. It contains also the user ID token to retrieve the user preferences, which are stored in the Travel Companion Cloud.

### **3.2.2.2 Overview of the Itinerary Offer data model**

---

This high-level class diagram shows the main classes and their relationships concerning the Itinerary Offer class model.

Some class attributes aim at clarifying the contents and use of the class.

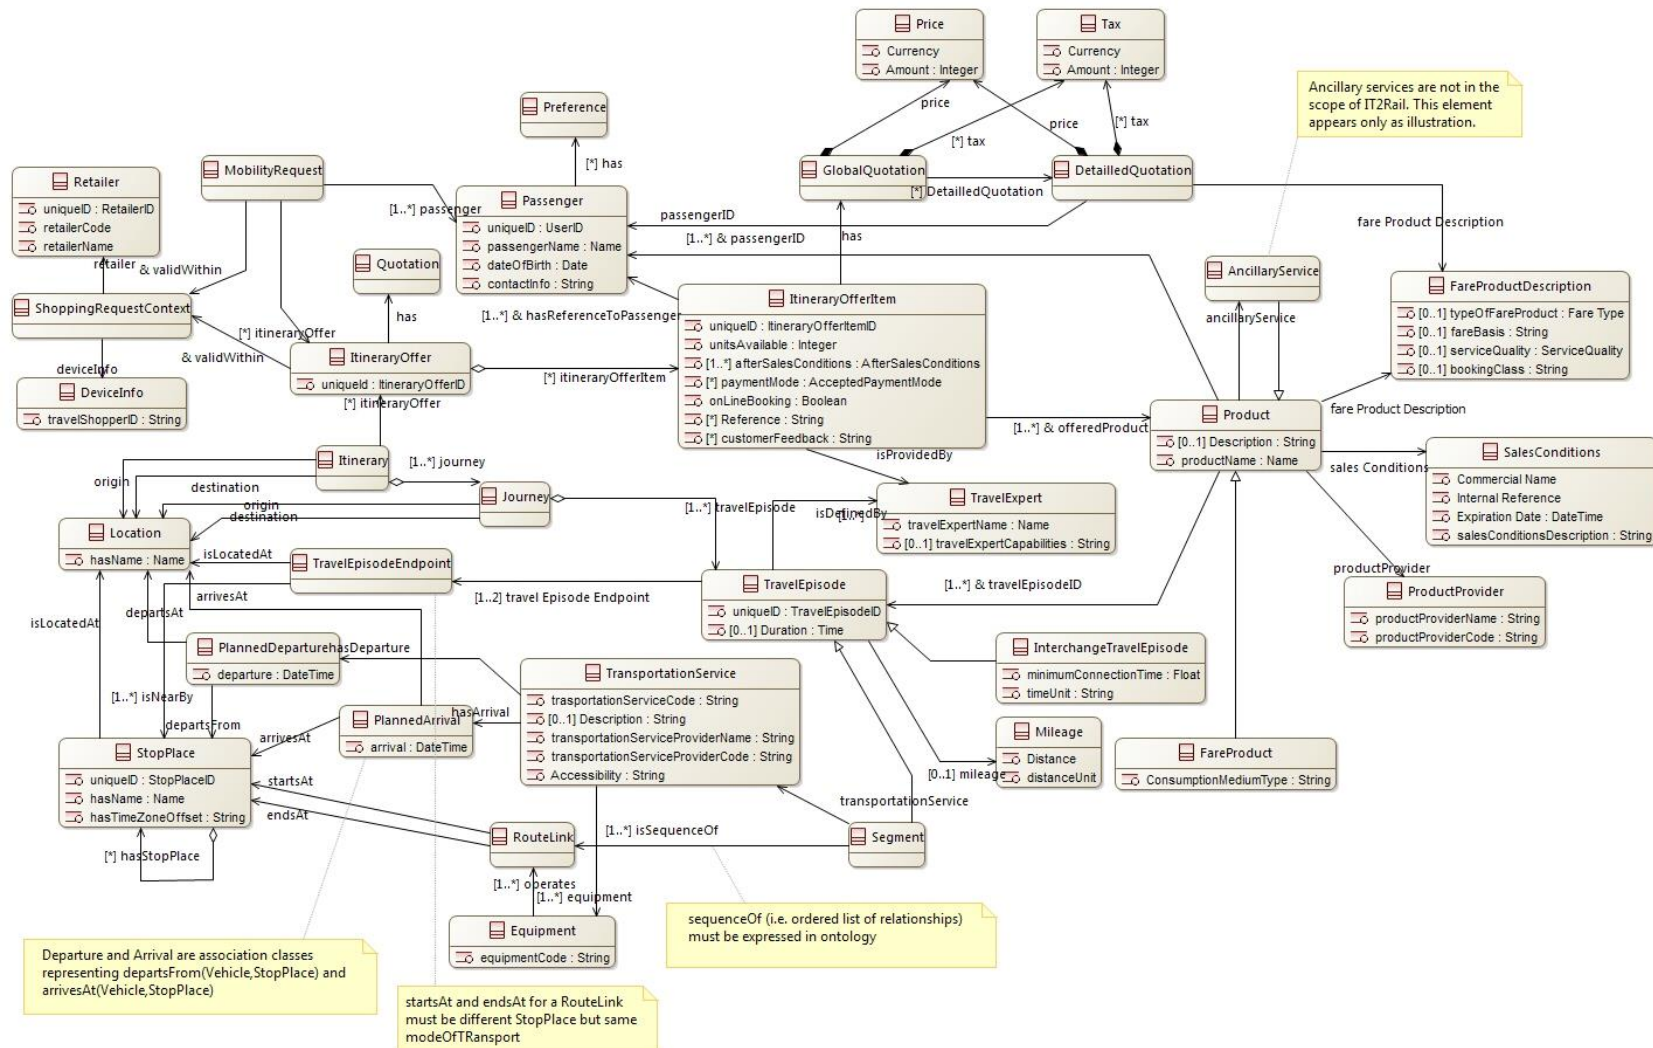

Figure 14: Itinerary Offer data model - Model reference: [CDB]L Shopping - Itinerary Offer

This model shows the organization of the Itinerary Offers in IT2Rail.

The Itinerary Offer is a combination of Itinerary Offer items.

An Itinerary Offer item is computed by a travel expert and corresponds to a unique combination of the following elements:

- Passenger(s). A passenger is defined by a set of preferences and his passenger ID.
- Travel episode(s). The travel episode is a part of the itinerary;
- Product(s). A product can be associated to the following elements: a reservation, a fare product description and ancillary services.

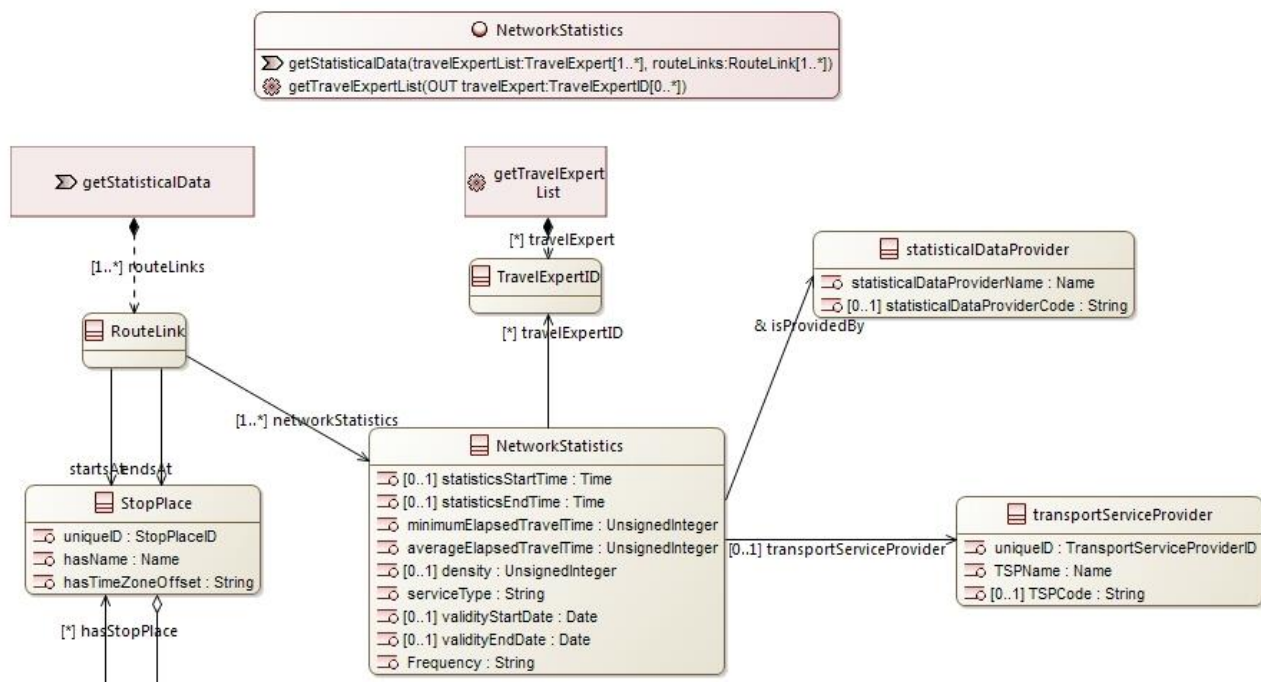

**Note:** Ancillary services are not in IT2Rail scope.

The Itinerary Offer contains also the description of the itineraries, which join origins and destinations specified in the Mobility Request.

### 3.2.2.3 Overview of the Network Data model

This high-level class diagram shows the main classes and their relationships concerning the Network Data class model.

Some class attributes aim at clarifying the contents and use of the class.

**Figure 15: Statistical Data for the Meta Route Explorer model**

This model shows the organization of the Network Data in IT2Rail.

The Network Data is a combination of Network daily statistics for a given list of RouteLinks.

These statistics are defined by a given Travel Expert.

### 3.2.2.4 Overview of the Itinerary model

This high-level class diagram shows the main classes and their relationships concerning the Itinerary class model.

Some class attributes aim at clarifying the contents and use of the class.

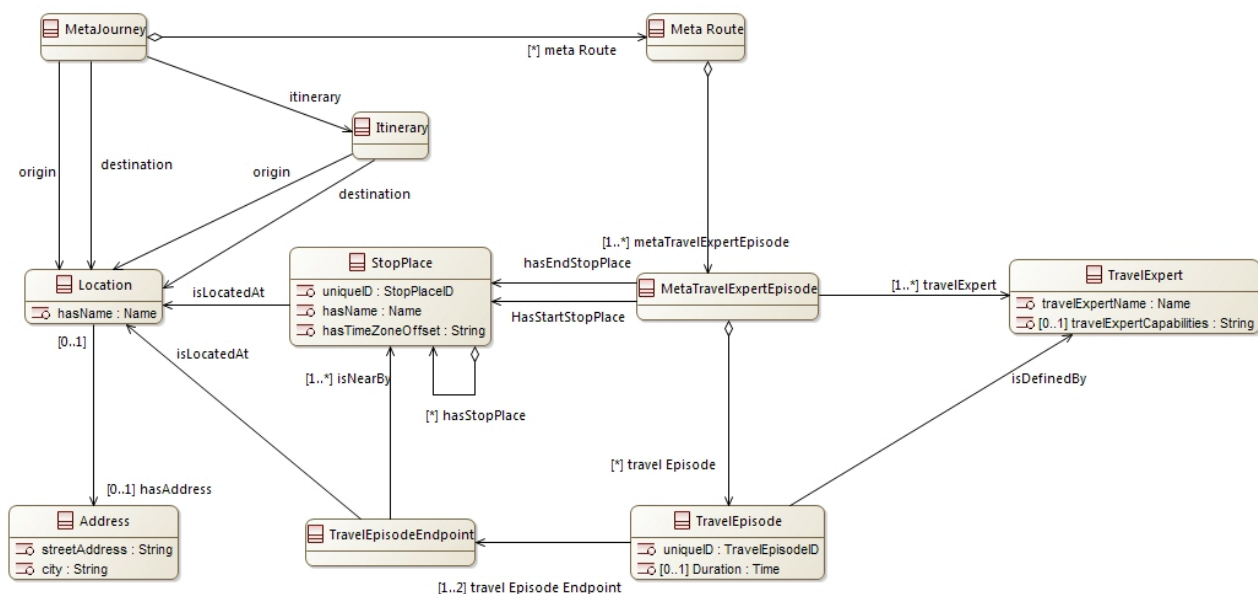

Figure 16: Itinerary model

This model shows the relationships between the itinerary and other routing items like journey, metaroute, travel episode, etc.

## 14/11/2018

Resource Identifier) are used as ID to provide reference to different services (Booking orchestrator for instance).

### 3.3.2.2 Shopping data model

The high-level class diagram on Figure 14 shows the main classes and their relationships.

Some class attributes are given to clarify the contents and use of the class. This data model shows the organization of the itinerary offers in the IT2Rail eco-system. The key point is that an itinerary offer is composed of itinerary offer items. These items may be priced and refer to a fare product description, fare rules and a fare product dependent customization parameters. One itinerary offer item could always be linked to a travel episode (refer to the overview of Itinerary model in Travel Shopping specifications) within an itinerary. The ancillary services are considered products.

The passenger preferences must include the capacities of the Travel Companion smart device for validation.

This model describes in detail the ItineraryOfferItem object and the Fare Product Description and term and conditions included in the Fare Rules Description. Such information is mandatory for the IT2Rail scheme as it be used for the entitlement and further Shift2Rail IP4 projects.

### 3.3.2.3 Fulfilment data model

This high-level class diagram shows the main classes and their relationships (Figure 18).

Some class attributes are given to clarify the contents and use of the class.

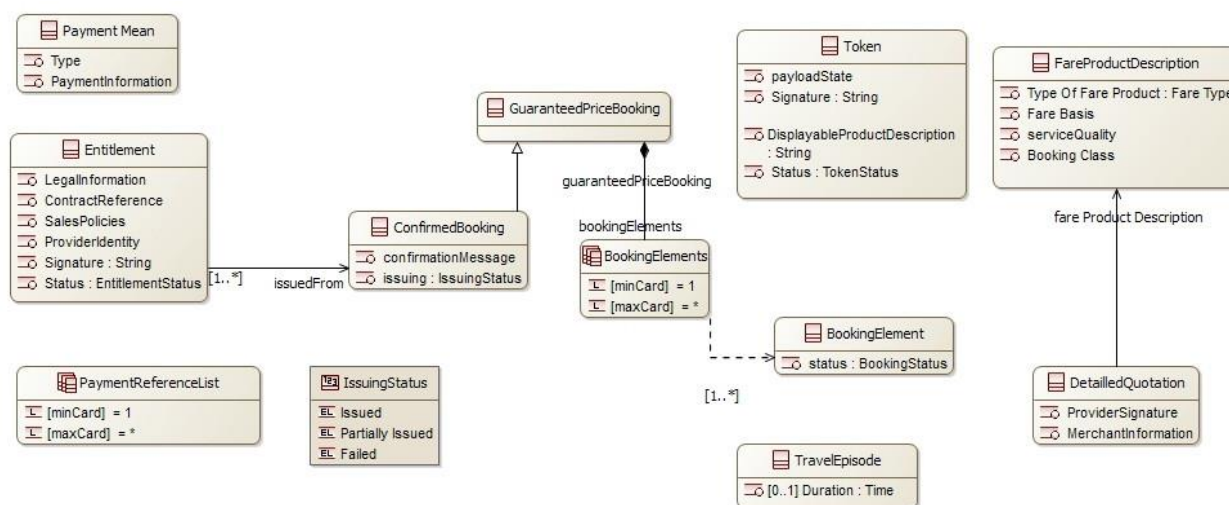

Figure 18: FulfillmentEngine data model

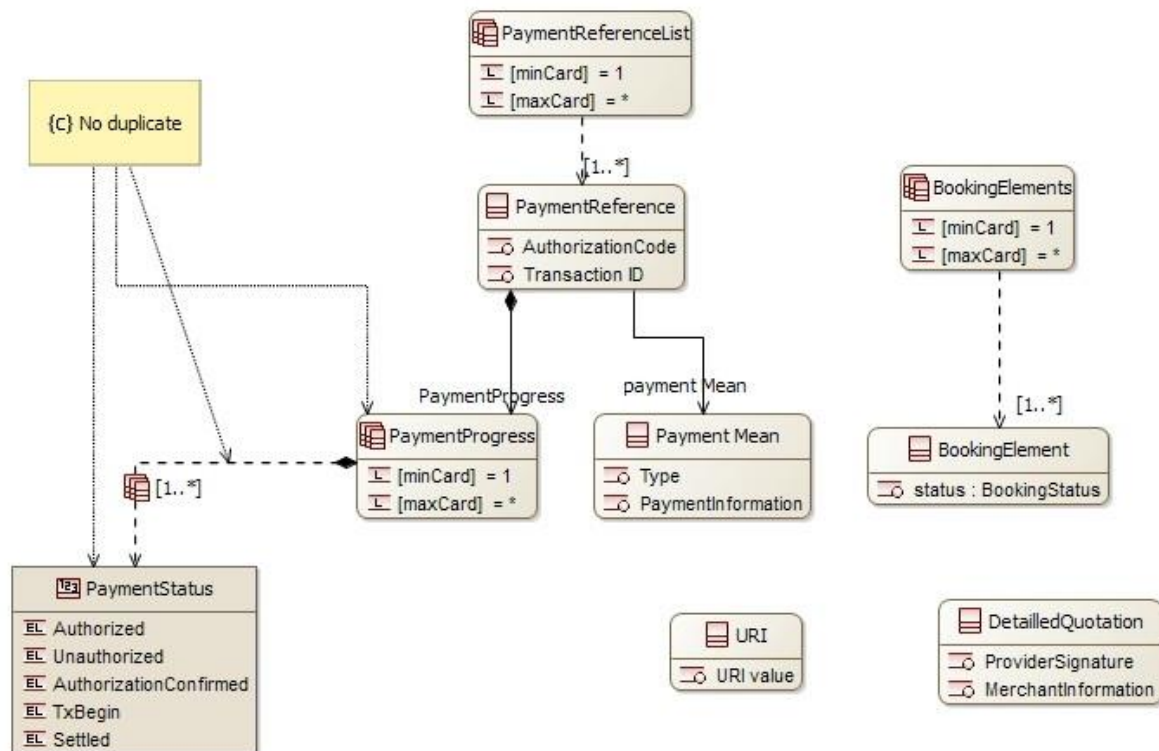

Model reference: [CDB]L Fulfillment - Orchestrate & issuing - Classes (SVN Version: 814)

This data model adds some detail regarding the payment means data and the status of multiple bookings (BookingElements and ConfirmedBooking).

### 3.3.2.4 Payment data model

This high-level class diagram shows the main classes and their relationships (Figure 19).

Some class attributes are given to clarify the contents and use of the class.

**Figure 19: Payment data model**

Model reference: [CDB]L Payment - Orchestrator - Classes (SVN Version: 814)

This data model is provided to detail the parameters of the payment and issuing interfaces. The **PaymentProgress** element is an ordered list with no duplicate of payment status that is used to track the progress of the two-step payment process for each payment reference.

### **3.3.2.5 Validation data model**

The following schema details the model used by Booking and Ticketing for the Entitlement and Token that Transport Service Provider issue (Figure 20).

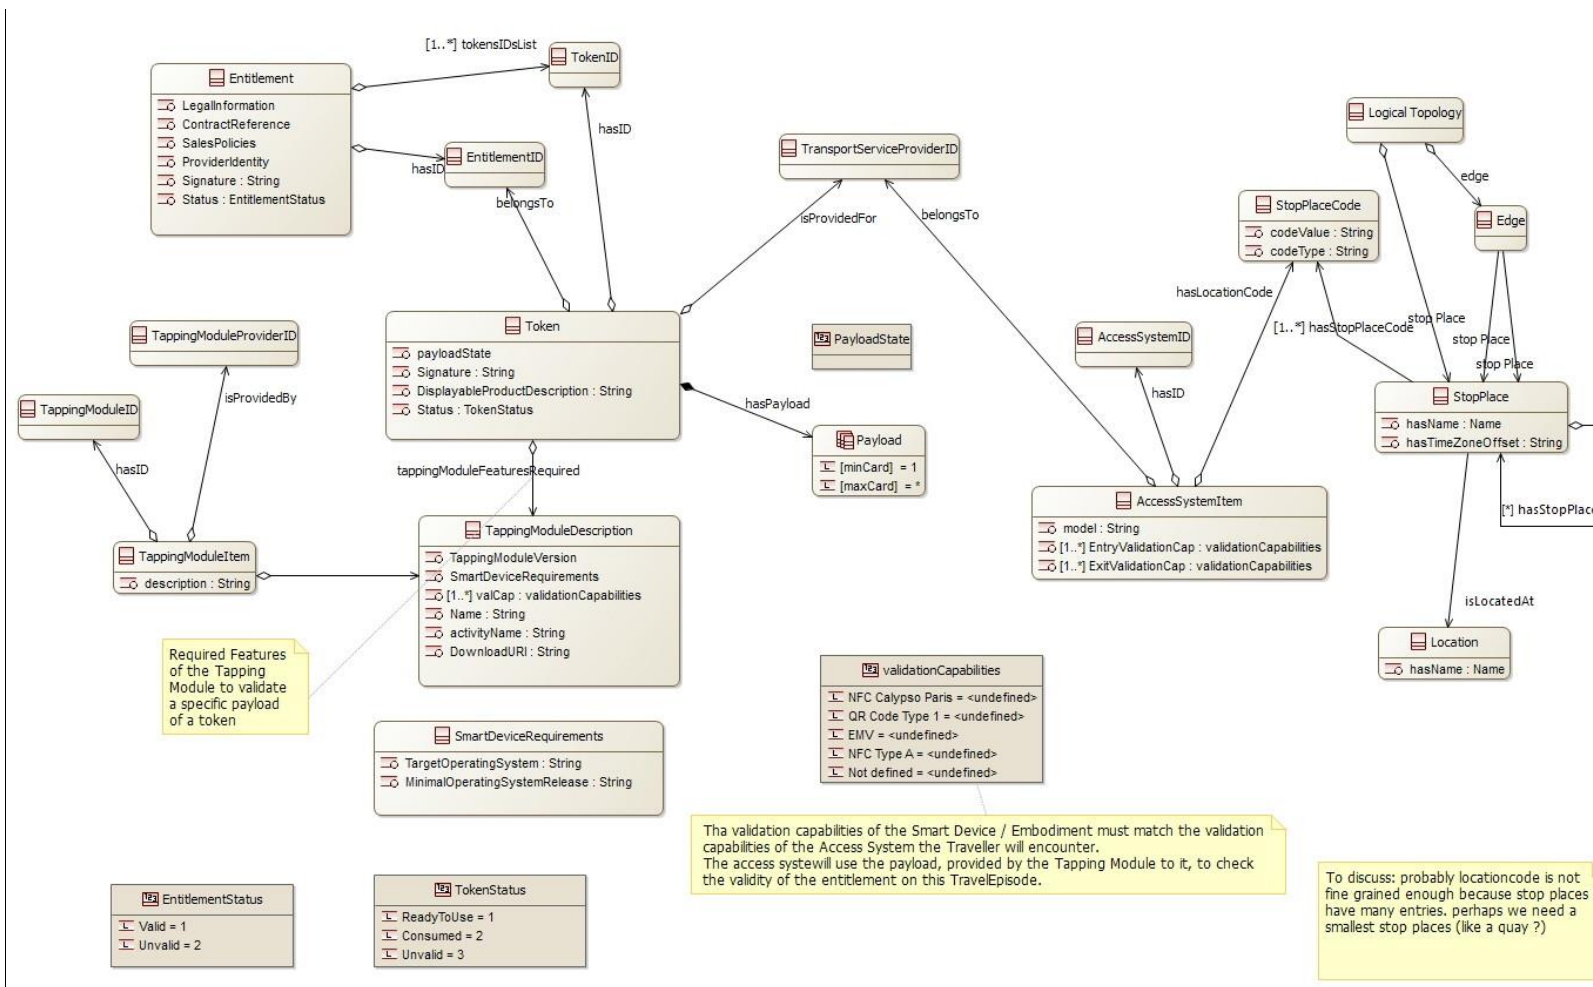

Figure 20: Entitlement & Token data model

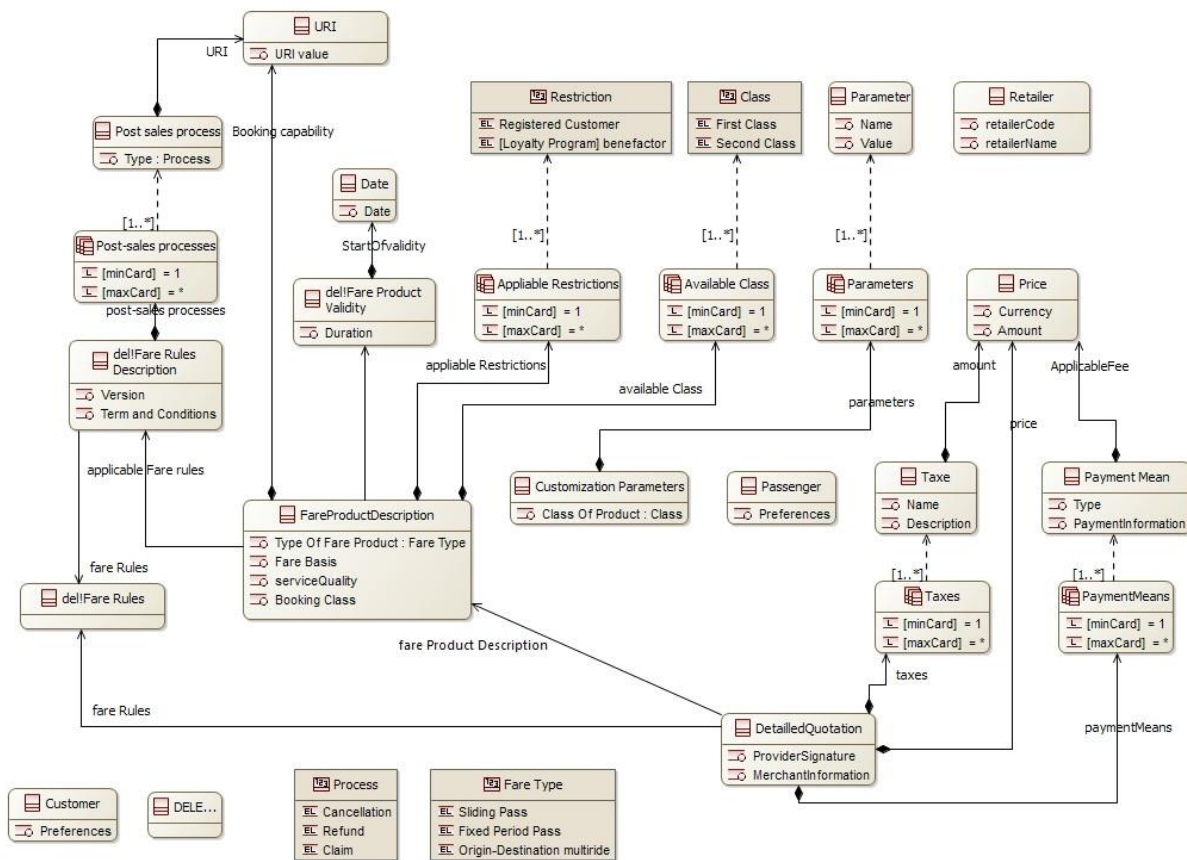

Model reference: [CDB]L Validation Capabilities management (SVN Version: 814)

In this schema it is important to notice that:

- Payload is a collection of Bytes. This is the information that a particular Tapping Module is able to use for validation;
- The Tapping Module ID: must allow the Travel Companion application to successfully download and execute the Tapping Module compatible for this particular Token.

### 3.3.2.6 Fare product data model

**Figure 21: Fare product data model**

Model reference: [CDB]L TSP Fare Product Engine - Classes (SVN Version: 814)

**Warning:** This is an example of a possible fare product data model. It may differ for each TSP.

The important point in this fare product data model (Figure 21) is that it models a description of the fare product rather than the actual fare structure of every fare product owner. As a result, the central object in this diagram is the **FareProductDescription**.

## 3.4 TRIP TRACKING

### 3.4.1 Description

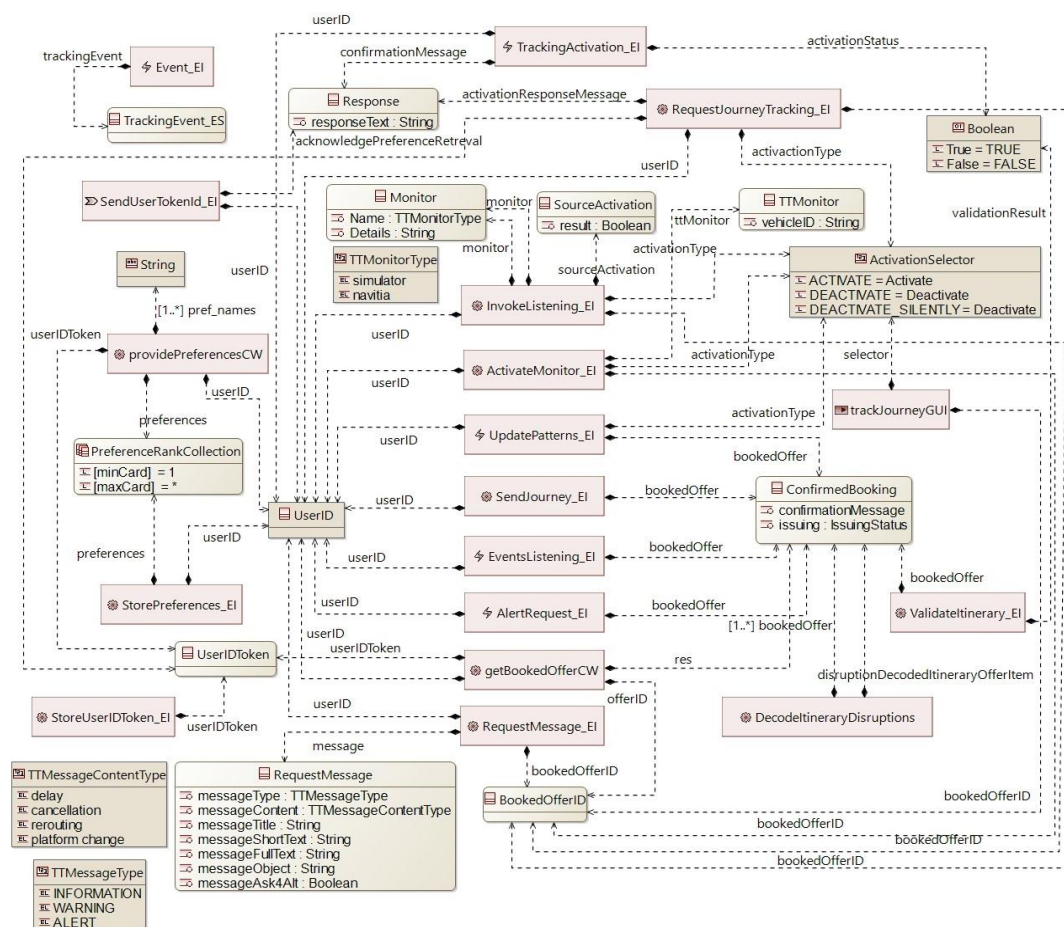

This chapter contains the functional / conceptual data model of the Trip Tracker interfaces. It must be linked with the ontology.

### 3.4.2 Data Model

#### 3.4.2.1 Activate Tracking data model

This diagram shows the main exchange items, classes and their relationships concerning the request of the activate tracking data model.

Some class attributes aim at clarifying the contents and use of the class.

**Figure 22: Activate Tracking data model**

Model reference: [CDB]L TT Activate Tracking

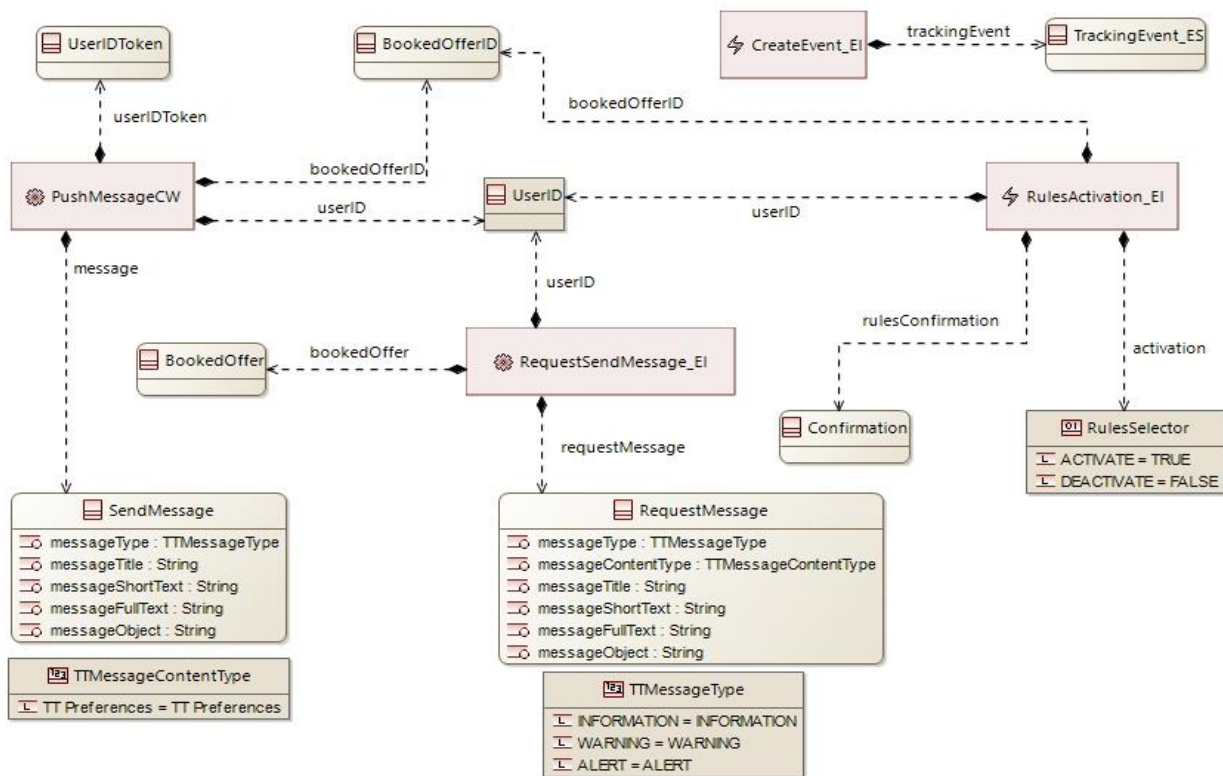

This data model specifies the organization of the Activate Tracking with the following classes:

- ActivationSelector – is an Enumeration type of values: activate, deactivate, deactivate\_silently;
- Boolean – is a Boolean type with the meaning of the activation or the deactivation of the tracking or the itinerary validation;
- BookedOfferID – is used to uniquely distinguish each BookedOffer;
- ConfirmedBooking – is a sequence of consecutive TravelEpisode(s). Each journey is based on a couple of origin and destination;
- Monitor – identifies the event source;
- PreferenceRankCollection – is a collection of user preferences within the tracking activation process and the aim is to receive those preferences, which are relevant for trip tracking; This enables to customize Trip Tracker's behaviour according to Traveller's preferences;
- RequestMessage – enables to request the Trip Tracker for sending the message to Travel Companion;
- Response – informs about the success/failure of taking the request into account;
- SourceActivation – is a Boolean type with the meaning of the activation or the deactivation of the listening of the event's source;
- String – is enumerating of the preferences in request;
- TrackingEvent\_ES – The event when the validation of the itinerary is not valid;
- TTMessageContentType – corresponds to „Message content“ in TT Preferences;
- TTMessageType – is also defined to easily distinguish the impact of the message
- TTMonitor – the activation of the particular event source based on vehicleID;
- TTMonitorType – the determination of the particular event source;
- UserID – is used to uniquely distinguish each user;
- UserIDtoken – is used to uniquely distinguish each user.

### 3.4.2.2 Perform Event Processing data model

This diagram shows the main exchange items, classes and their relationships concerning the display of the Perform Event Processing data model.

**Figure 23: Perform Event Processing data model**

Model reference: [CDB]L TT Perform Event Processing

This data model specifies the organization of the Perform Event Processing with the following classes:

- ArrivalDelay – the event related to the delay of the arrival;
- ArrivalDelayEvent – the structure of the event related to the delay of the arrival which is logged for further processing in the Business Analytics;
- ArrivalDelayEventRules – the activation of the rules related to ArrivalDelayEvent. When the rules are matched, they will be used as a threshold for determining which type of message;
- BookedOfferID – is used to uniquely distinguish each BookedOffer;
- DepartureDelay – the event related to the delay of the departure;
- DepartureDelayEvent – the structure the event related to the delay of the departure which is logged for further processing in the Business Analytics;
- DepartureDelayEventRules – the activation of the rules related to DepartureDelayEvent; When the rules are matched, they will be used as a threshold for determining which type of message;
- Disruption – the disruption identified by event source which may have the impact on a journey;
- DisruptionEffect – the type of the disruption's effect which Trip Tracker is able to recognize;

- DisruptionStatus – determines the disruption's status, whether the disruption is active, whether it happened in the past or is expected/scheduled in the future;
- RequestDate – the timestamp identifying when the request for the activation/deactivation of the rules was sent;
- RequestMessage – enables to request the Trip Tracker for sending the message to Travel Companion;
- RulesConfirmation – confirmation of the rule's activation or deactivation;
- RulesDeactivationRequest – the request related to the deactivation of the rules;
- StopPointStatus – the determination of the departure's status: added, deleted, delayed, and unchanged;
- TrackingEvent\_ES – is the detected event from the events sources;
- TTMessageContentType – corresponds to „Message content“ in TT Preferences;
- TTMessageType – is also defined to easily distinguish the impact of the message;
- TTStopPlace – determines the place where the delay of the arrival/departure occurred;
- UserID – is used to uniquely distinguish each user;
- UserIDToken – is used to uniquely distinguish each user.

### 3.4.2.3 User Interface data model

This diagram shows the main exchange items, classes and their relationships concerning the request of the User Interface data model.

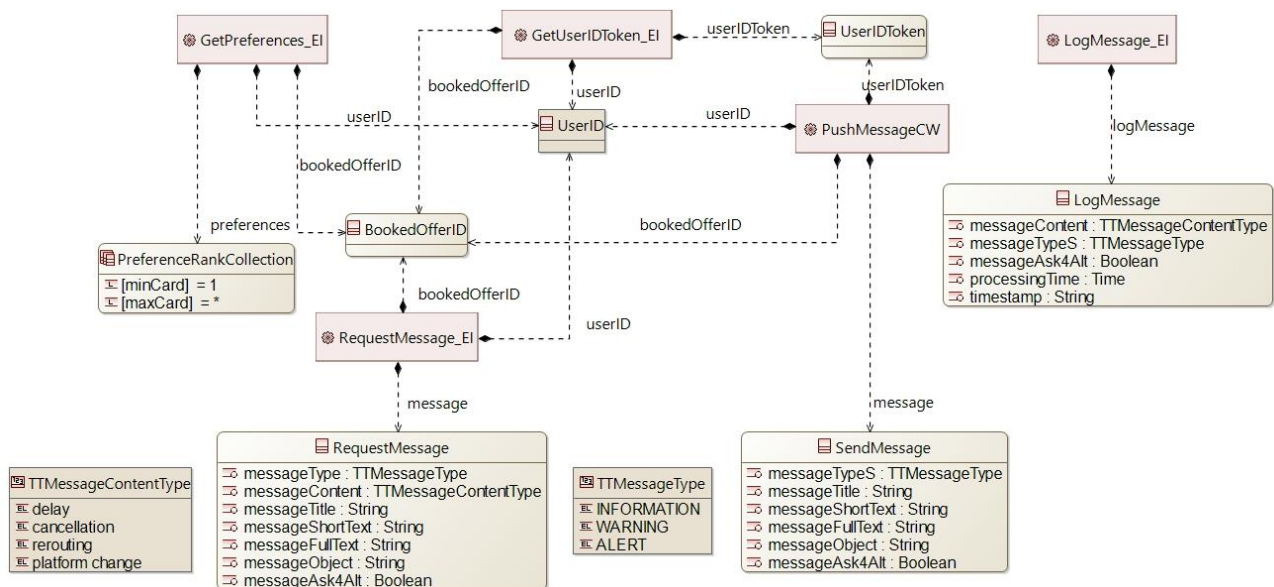

Figure 24: User Interface data model

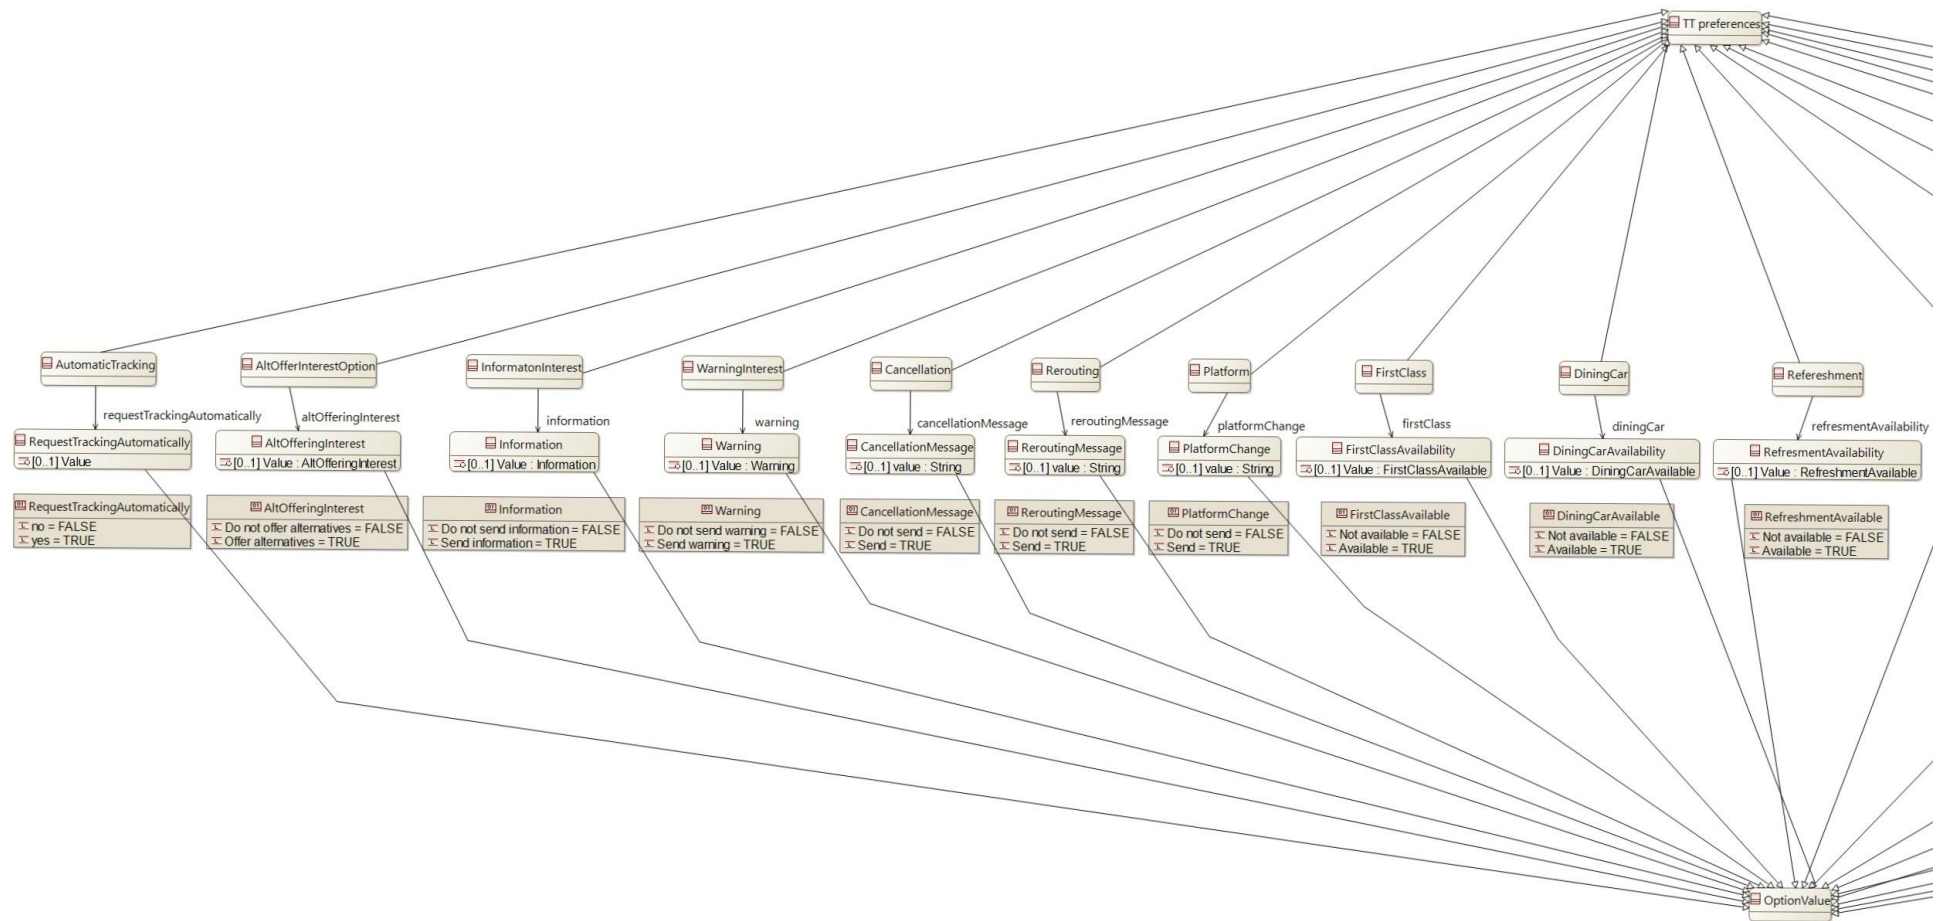

Model reference: [CDB]L TT User Interface

This data model specifies the organization of the User Interface with the following classes:

- BookedOfferID – is used to uniquely distinguish each BookedOffer;
- LogMessage – the data structure related to the message which is logged for further processing in the Business Analytics;
- PreferenceRankCollection – is a collection of user preferences within the tracking activation process and the aim is to receive those preferences, which are relevant for trip tracking; This enables to customize Trip Tracker's behaviour according to Traveller's preferences;
- RequestMessage – enables to request the Trip Tracker for sending the message to Travel Companion;
- SendMessage – aims at sending a message to the Traveller through the Travel Companion;
- TTMessageContentType – corresponds to Message content in TT Preferences;
- TTMessageType – is also defined to easily distinguish the impact of the message;
- UserID – is used to uniquely distinguish each user;
- UserIDtoken – is used to uniquely distinguish each user.

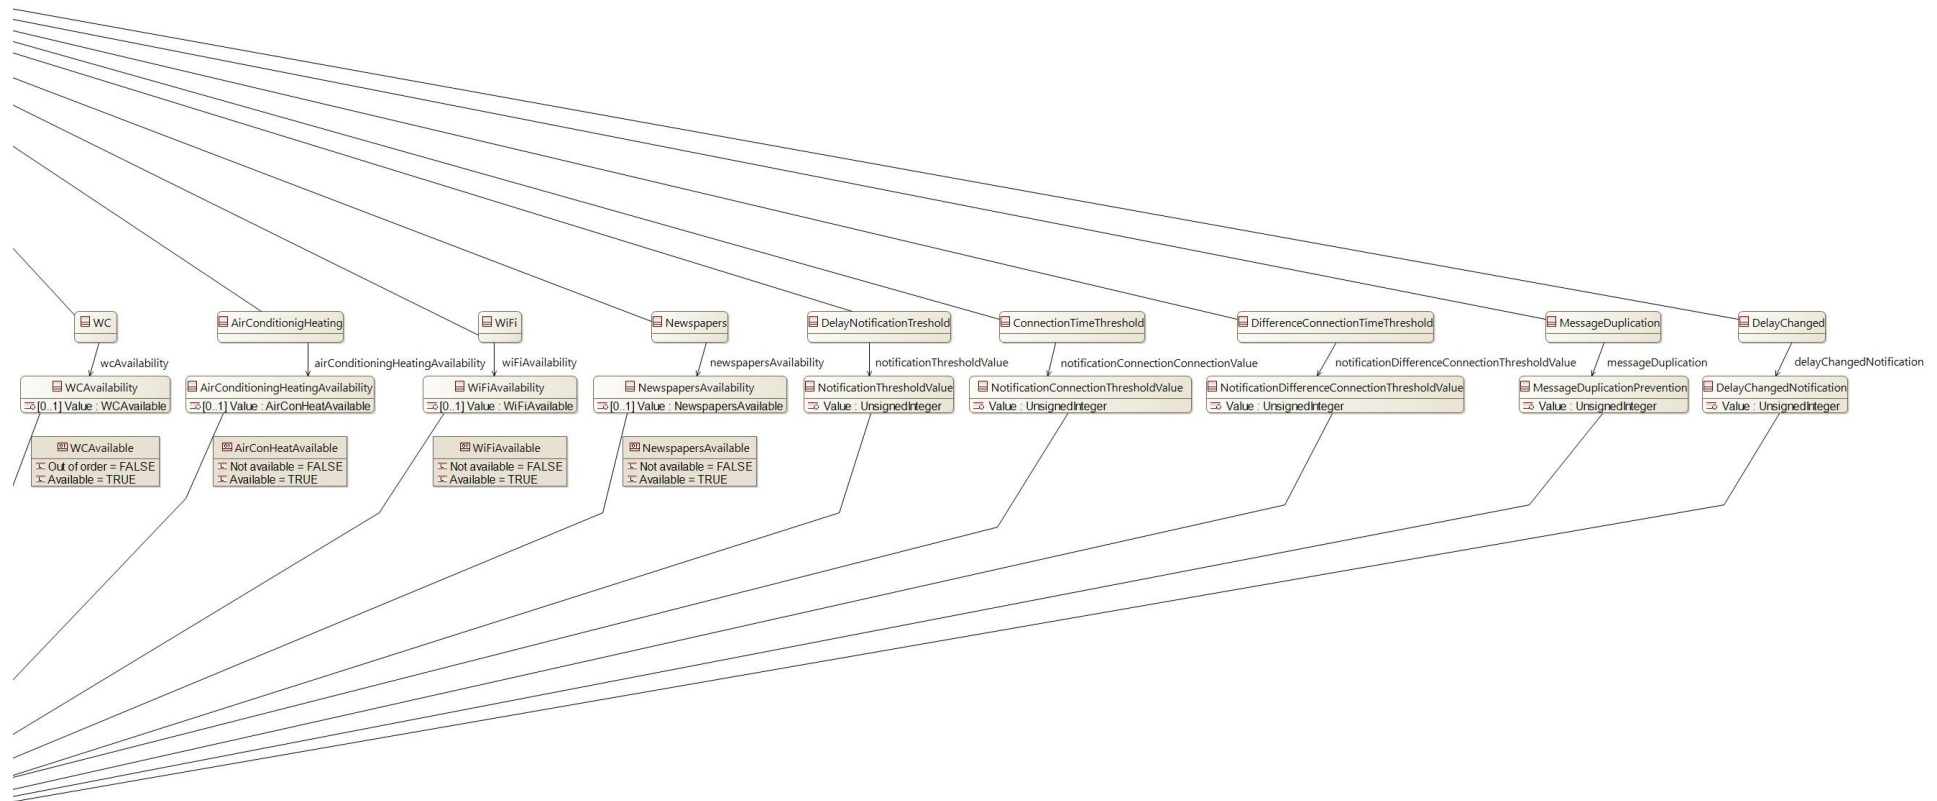

#### **3.4.2.4 Trip Tracker's Preferences data model**

This diagram shows the main exchange items, classes and their relationships related to the Trip Tracker's preferences. This set of Trip Tracker's preferences is only a sample for the project purposes. These preferences can be modified and extended in the follow-up projects.

**Figure 25: Trip Tracker's Preferences data model (part 1)**

Model reference: *[CDB]L TT Preferences*

Model reference: [CDB]L TT Preferences

This data model specifies the organization of Trip Tracker's preferences with the following classes:

- AutomaticTracking – Request journey tracking automatically, when a new itinerary is stored in the CW;
- AltOfferInterestOption – Ask about interest in alternatives offering, where applicable;
- InformationInterest; WarningInterest – Enable/disable receiving messages of selected type;
- Cancellation; Rerouting; Platform; FirstClass; DiningCar; Refreshment; WC; AirConditioningHeating; WiFi; Newspapers – display only messages selected by the user, i.e. avoid displaying unwanted messages;
- DelayNotificationTreshold – Don't display a warning, when the delay is less than given time;
- ConnectionTimeTreshold – Don't display a warning, when remaining connection time is less than given value;
- DifferenceConnectionTimeTreshold – Don't display a warning, when the difference between remaining and minimum connection time is less than given value;
- MessageDuplication – Don't display the same message again, if less than given time since the last display elapsed;
- DelayChanged – Consider the delay unchanged (so the delay message still the same), if it has changed by less than given value.

### 3.4.2.5 Manage Alternatives data model

This diagram shows the main exchange items, classes and their relationships concerning the request of the Manage Alternatives data model.

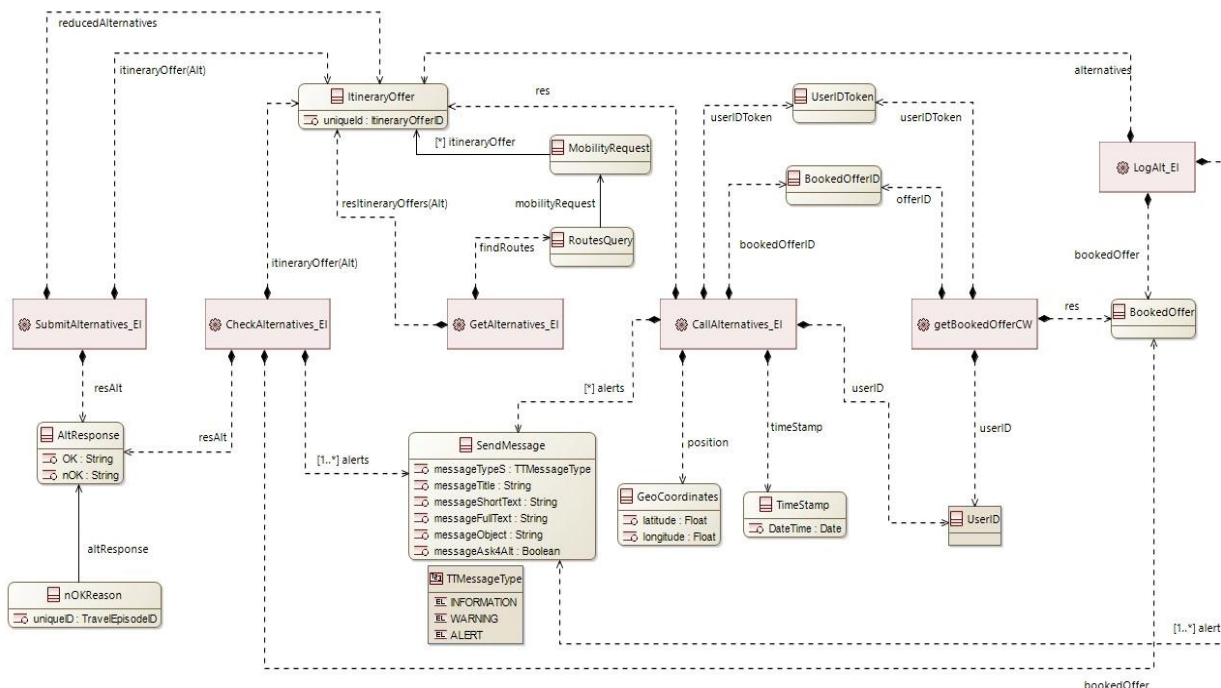

Figure 27: Manage Alternatives data model

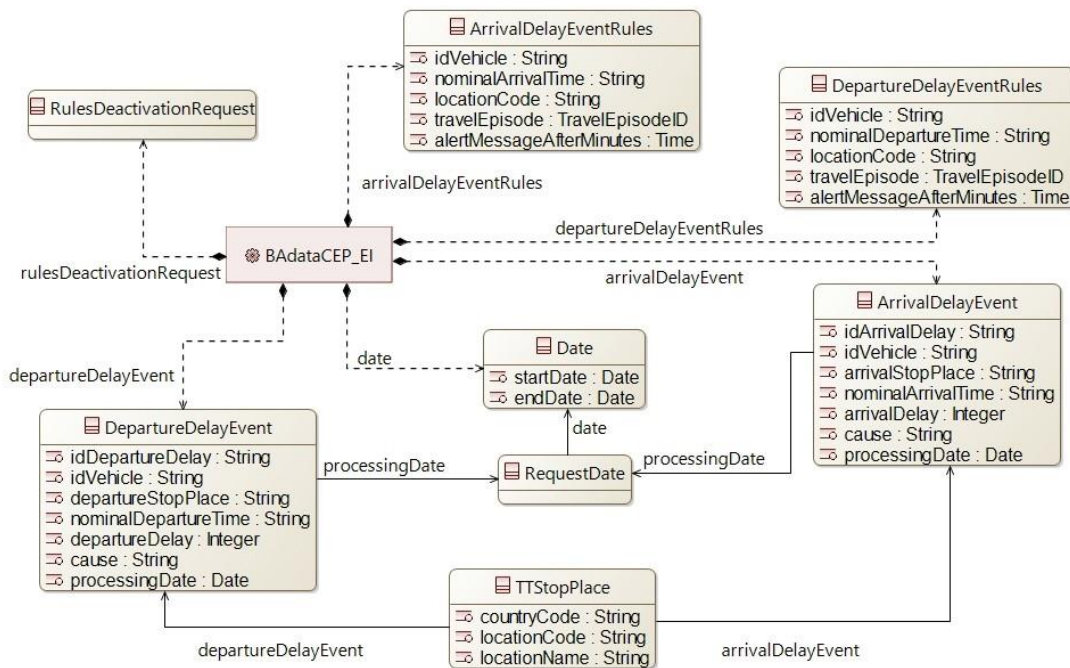

Model reference: [CDB]L TT Manage Alternatives

This data model specifies the organization of the Manage Alternatives with the following classes:

- AltResponse – is the response whether the check of alternatives was successful or not;
- BookedOffer – is a sequence of consecutive TravelEpisode(s). Each journey is based on a couple of origin and destination;
- BookedOfferID – is used to uniquely distinguish each BookedOffer;
- GeoCoordinates – Coordinates of a point expressed in decimal format (WS84);
- ItineraryOffer – is the response in the form of the offer of the alternatives to the request of the alternatives;
- MobilityRequest – is the Traveller's query for travel information about a specific itinerary;
- nOKReason – identifies travel episodes for which the checking was not successful;
- RoutesQuery – the selected route by the Traveller – the origin, the destination and the transport mode;
- SendMessage – aims at sending a message to the Traveller through the Travel Companion;
- TimeStamp – the moment when the Trip Tracker received the request for the calculation of alternatives;
- TTMessageType – is also defined to easily distinguish the impact of the message;
- UserID – is used to uniquely distinguish each user;
- UserIDToken – is used to uniquely distinguish each user.

### 3.4.2.6 BA Cooperation data model

The following diagram shows the main exchange items, classes and their relationships concerning the request of the BA Cooperation - CEP data model.

**Figure 28: BA Cooperation - CEP data model**

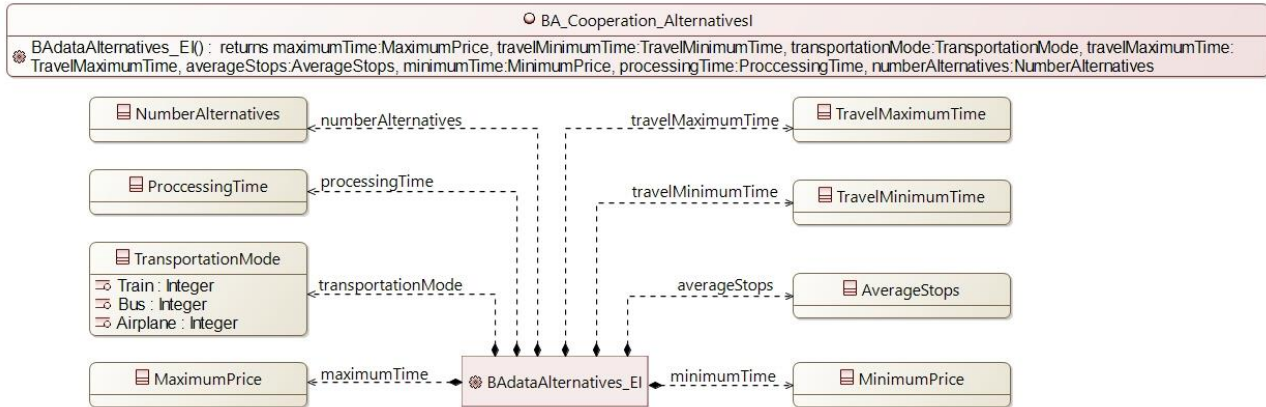

Model reference: [CDB]L TT BA Cooperation CEP

This data model specifies the organization of the BA Cooperation - CEP with the following classes:

- ArrivalDelayEvent – the event related to the delay of the arrival;
- ArrivalDelayEventRules – the activation of the rules related to ArrivalDelayEvent. When the rules are matched, they will be used as a threshold for determining which type of message;
- DepartureDelayEvent – the event related to the delay of the departure;
- Date – date on the basis of which all the required information about the events shall be sent;
- DepartureDelayEventRules – the activation of the rules related to DepartureDelayEvent. When the rules are matched, they will be used as a threshold for determining which type of message;
- RequestDate – identifies the date when the request for the activation/deactivation of the rules was sent;
- RulesDeactivationRequest – the request related to the deactivation of the rules;
- TTStopPlace – the determination of the place where the delay of the arrival/departure occurred.

The following diagram shows the main exchange items, classes and their relationships concerning the request of the BA Cooperation - alternatives data model.

**Figure 29: BA Cooperation - alternatives data model**

Model reference: [CDB]L TT BA Cooperation Alternatives

This data model specifies the organization of the BA Cooperation - alternatives with the following classes:

- **AverageStops** – the average of the AverageAlternatives field;
- **MaximumPrice** – the maximum of the AveragePrice field;
- **MinimumPrice** – the minimum of the AveragePrice field;
- **NumberAlternatives** – number of alternatives submitted in given period;
- **ProcessingTime** – average of the ProcessingTime field;
- **TransportationMode** – count of the TransportStops field by type;
- **TravelMaximumTime** – the average of the TravelMaximumTime field;
- **TravelMinimumTime** – the average of the TravelMinimumTime field.

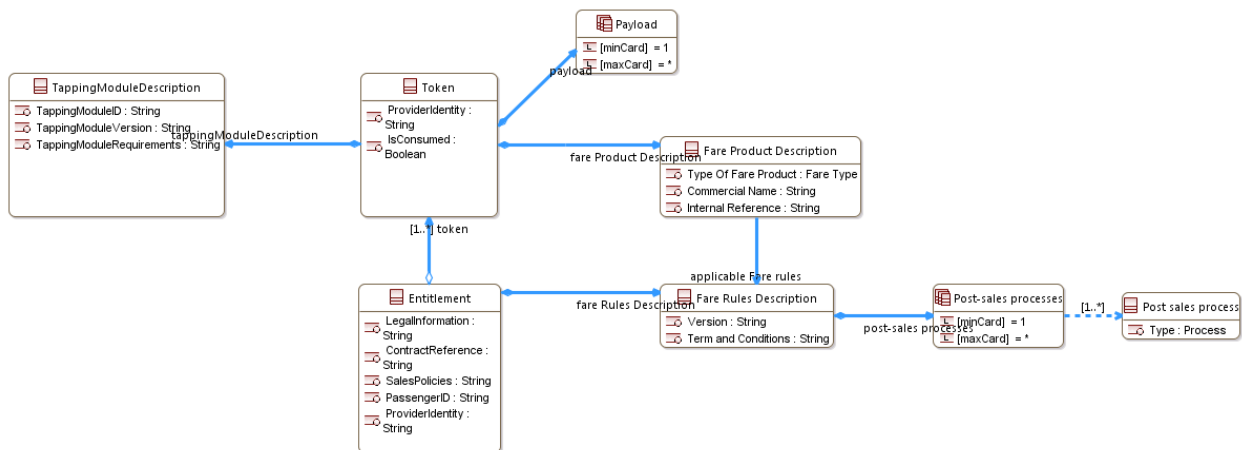

## 3.5 TRAVEL COMPANION

### 3.5.1 Description

The following chapter is describing the data organization and structure from Travel Companion point of view; These elements are used in the interface definition of the Travel Companion components; Such elements may be reused and detail may be added from other functional area point of view;

### 3.5.2 Data Model

Within the Travel Companion application, the Tapping Modules are manipulating the data described in the following schema;

**Figure 30: Tapping module data model**

This diagram shows the relationship between the Token and the TappingModule; The Token is compatible with an identified version of a TappingModule that must be used to perform the validation process; How does the TappingModule uses the Token is implementation dependent.

Figure 31 shows some of the types of data that are referenced in the operations invoked and called on TC; It does not show all types of data which TC handles, but only those that are more specific to it, which are essentially, though not only, the ones that TC generates.

**Figure 31: Classes defining the types of data specific to TC**

More precisely, the information that TC generates is in particular related to the traveller: her identity, her preferences, etc;

Naturally, TC handles many kinds of data related to the traveller's trips, such as itineraries, offers, bookings, entitlements, and so on; However, for simplicity these data are not described in this document, but they are left for companion specifications of other IT2Rail modules.

## 3.6 BUSINESS ANALYTICS

### 3.6.1 Description

The next section contains the class diagram designed by using the Capella tool as well as a short description of each involved class;

### 3.6.2 Data Model

#### 3;6;2;1 Overview of the BA internal data model

The following figure (Model reference: “[CDB]L BA Internal Data” diagram, SVN version 794) describes the data needed by WP6 to compute its KPIs:

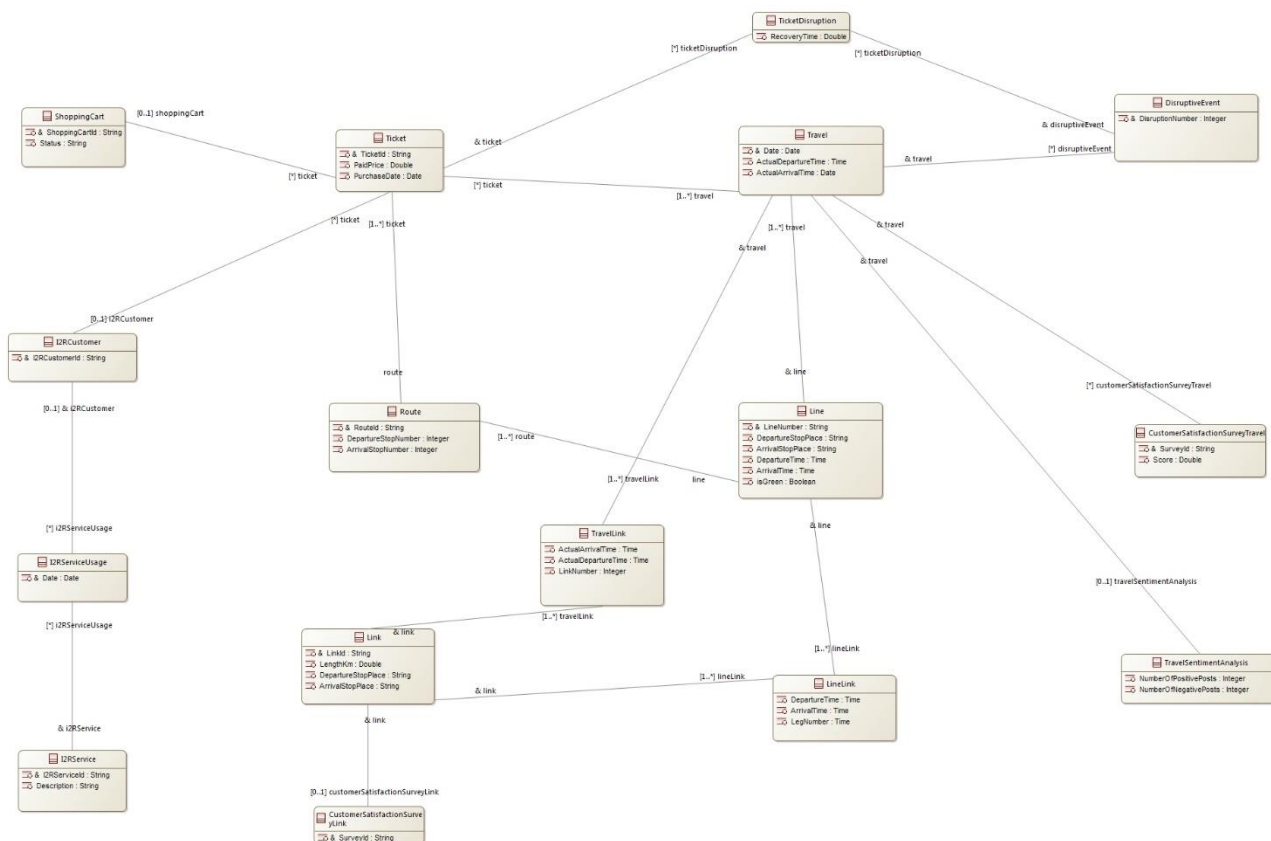

Figure 32: The Business Analytics internal class diagram

A brief description of the employed classes follows:

**Link:** It is a pair of consecutive stopping places; It is characterized by departure and arrival stopping places, and length;

**Line:** Represents the key element of the transportation network, e.g.; a train line or a flight; It is characterized by departure and arrival stopping places, scheduled departure and arrival times, and a flag indicating whether this line is green;

**LineLink:** Connects a line with the links which it encompasses; It is characterized by the scheduled arrival and departure times, and by the number of the link within the line;

**Route:** Fragment of the line, delimited by two stops; It is associated with its line, and characterized by the numbers of the delimiting stops;

**Travel:** Travel of a line, executed in a specific date; It is associated with its line, and characterized by the actual departure and arrival times;

**TravelLink:** Connects a travel with the links which it encompasses; It is characterized by the actual arrival and departure times, and by the number of the link within the travel;

**Entitlement-WP6:** Entitlement for traveling; It is associated with a route and a travel; It might be associated with a shopping cart, if it was bought online, and with a customer, if the customer is a registered IT2Rail user; It is characterized by purchase date and paid price;

**DisruptiveEvent:** Represents an event which has an impact on a travel; It is associated with the disrupted travel;

**EntitlementDisruption:** Connects the disruptive events with the entitlements they affected; It is characterized by the recovery time;

**CustomerSatisfactionSurveyTravel:** Represents a survey conducted to assess the satisfaction of a user about a specific travel; It is associated with the surveyed travel, and characterized by the score provided by the user;

**CustomerSatisfactionSurveyLink:** Represents a survey conducted to assess the satisfaction of a user about a specific link; It is associated with the specific link, and characterized by the score provided by the user;

**TravelSentimentAnalysis:** Represents the sentiment analysis executed on the data derived from social networks regarding a specific travel; It is associated with the analyzed travel and characterized by the number of positive and negative retrieved posts;

**ShoppingCart:** Represents a shopping cart for entitlement purchase; It is characterized by a status, i.e.; “completed”, “abandoned” or “in use”;

**I2RCustomer:** Represents a customer registered within IT2Rail;

**I2RService:** Represents an ancillary service provided by IT2Rail;

**I2RServiceUsage:** Represents the usage of an IT2Rail service by an IT2Rail user, in a specific date;

### 3;6;2;2 Overview of the BA KPI data model

The following figure (Model reference: “[CDB]L BA KPI” diagram, SVN version 794) shows the main exchange items, classes and their relationships concerning KPIs:

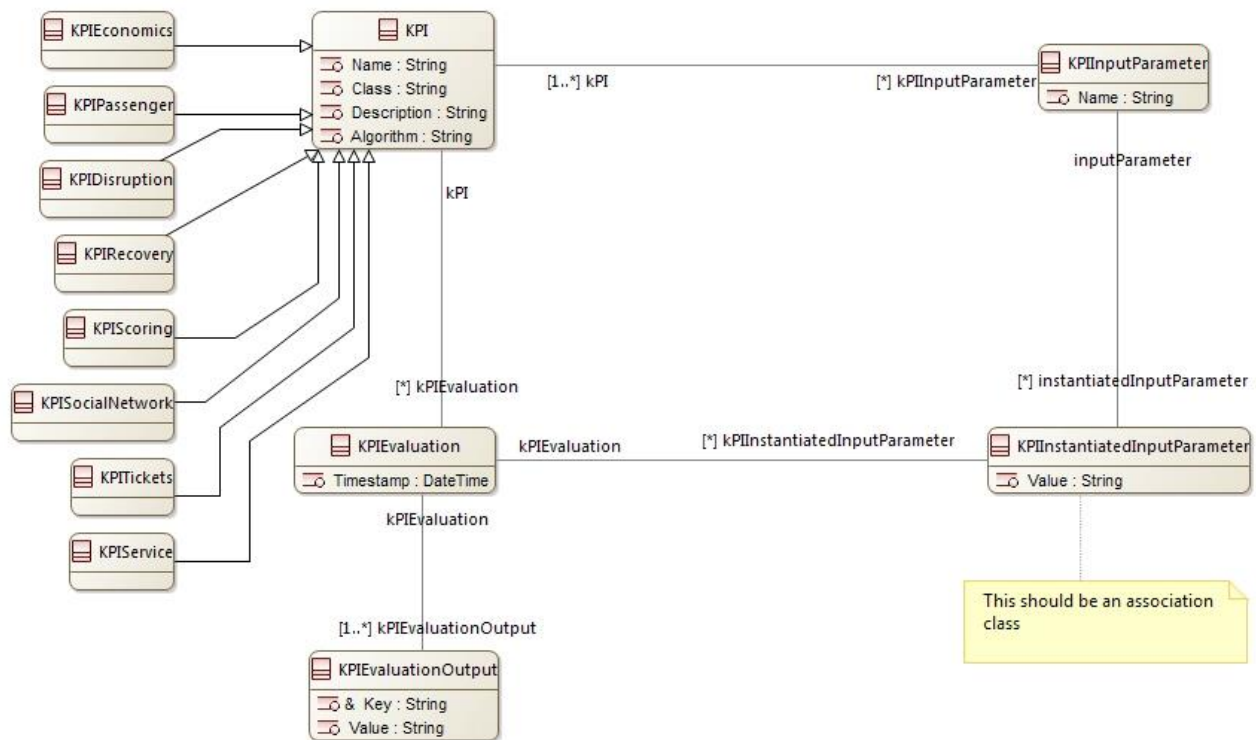

Figure 33: The Business Analytics KPI class diagram

## 4. INTERFACES

### 4.1 GENERAL OVERVIEW

On this section it will be described the operations available per interface; This description will be done using the following interface description structure:

<b>Interface ID:</b>	The ID of this interface		
<b>Interface Name:</b>	The Name of this Interface		
<b>Purpose of the Interface</b>	The purpose of the interface		
<b>Requestor:</b>	Who uses the interface		
<b>Provider</b>	Who provides the interface		
<b>Description:</b>	Description of this interface		
<b>Preconditions:</b>	Which conditions must be fulfilled to use this interface		
<b>Postconditions:</b>	Which conditions are fulfilled after the use of this interface		
<b>Request / Input</b>	Name	M / O / C	Description / Example
	Name	M / O / C	Description / Example
	Name	M / O / C	Description / Example
<b>Response / Output</b>	Name	M / O / C	Description / Example
	Name	M / O / C	Description / Example
	Name	M / O / C	Description / Example
<b>Exceptions:</b>	Which exceptions could appear		
<b>Notes and Issues:</b>	Additional notes, issues and comments		

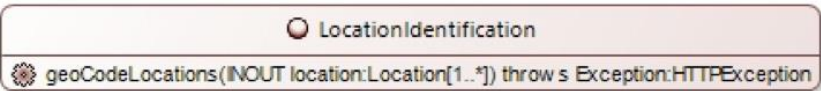

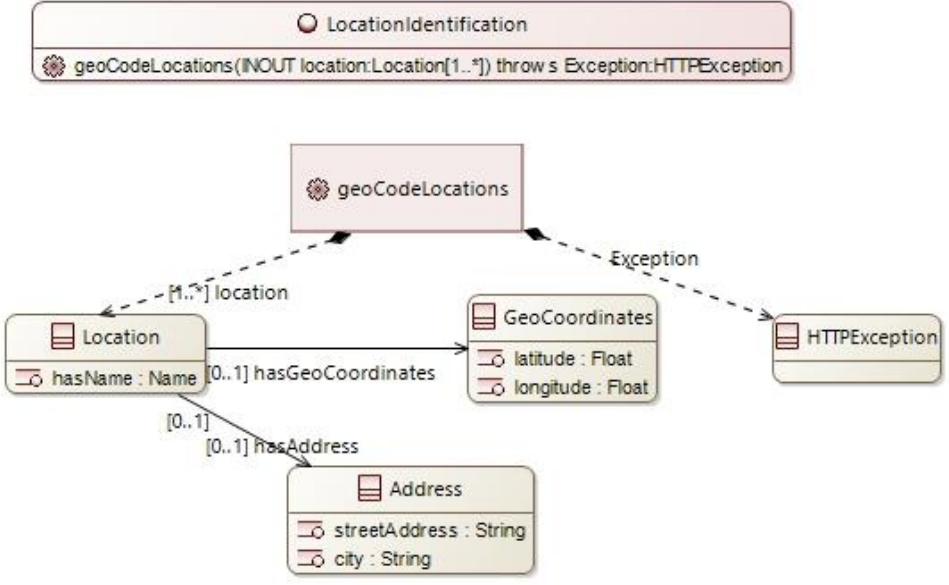

## 4.2 INTERFACES IN DETAIL

### 4.2.1 Interoperable Framework interfaces

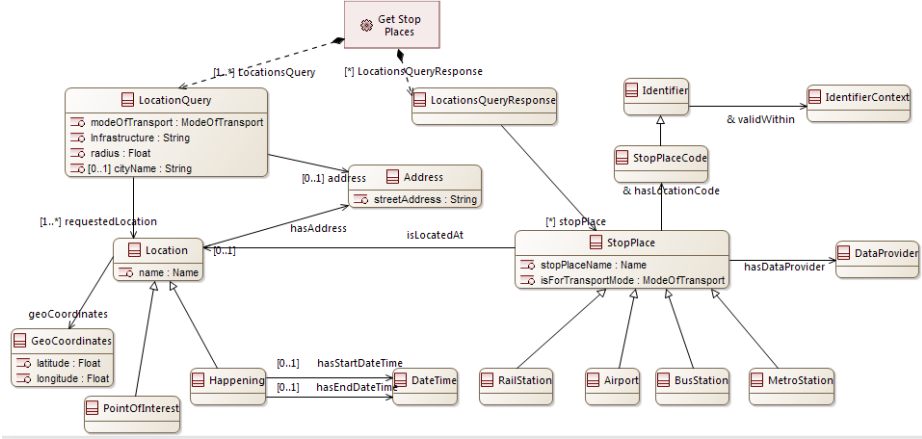

The list of interfaces provided by the Interoperability Framework:

Name	Purpose
Interface 1 – Location Identification	Provide list of Locations with geo coordinates
Interface 2 – Location Resolver	Provide list of Stop Place within a given radius of a Location
Interface 3 – Travel Expert Resolver	Associate Meta Travel Expert Episode with corresponding Travel Expert service descriptors
Interface 4 – Network Statistics	Provide Network data statistic as a list of RouteLinks with associated statistics information Provide list of Travel Experts registered in Semantic Web Service Registry;
Interface 5 – Navitia Decoder	Return Decode Confirmed Booking ItineraryOfferItem Stop Place and Transportation Vehicle data elements in the Navitia coding convention
Interface 6 – Travel Expert Broker	Provide a proxy to external, heterogeneous Travel Experts for shopping
Interface 7 – booking Engine Broker	Provide a proxy to external, heterogeneous Travel Experts for booking

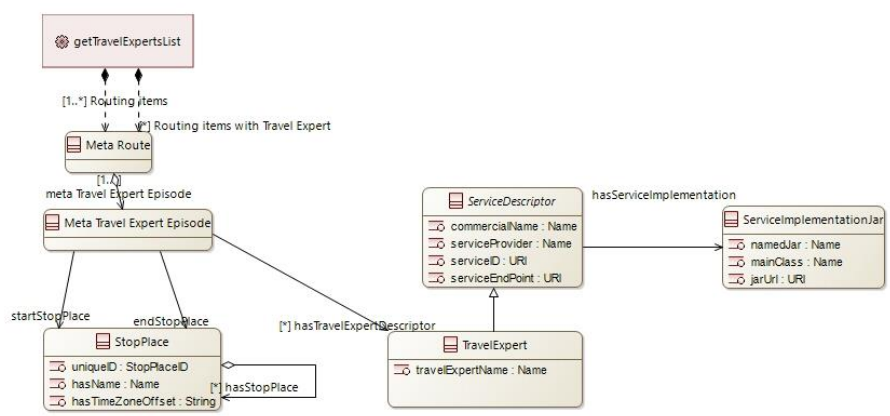

### Interface 1 - Location Identification

Interface ID:	1
Interface Name:	
Purpose of the Interface	Provide list of Locations with geo coordinates
Requestor:	Travel Companion (Travel Companion component)
Provider	GeoCoding service
Description:	Provide list of Locations with geo coordinates
Preconditions:	Url encoded string for location name
Postconditions:	Zero, one or more locations with geo coordinates returned
Exchange Items	
Exceptions:	Http exception for invalid request or no results
Notes and Issues:	

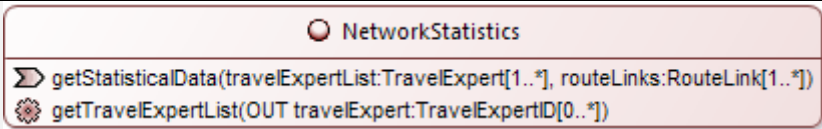

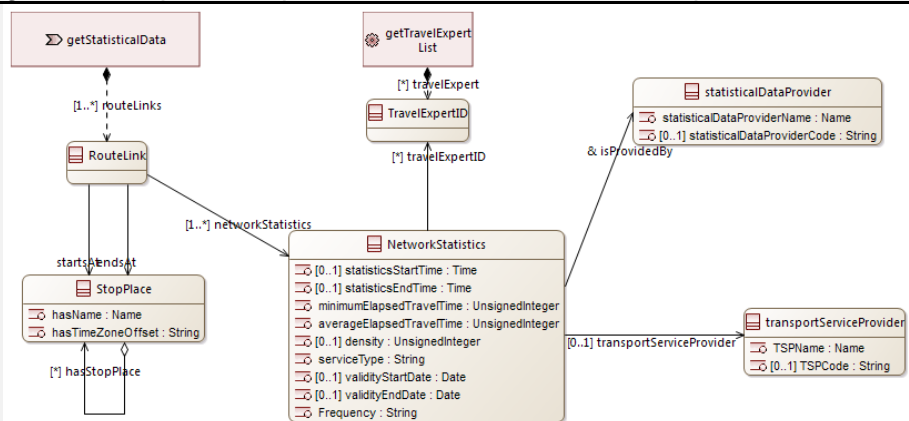

## Interface 2 - Location Resolver

Interface ID:	2
Interface Name:	<div>LocationsResolver</div> <div>Get Stop Places (IN LocationsQuery:LocationQuery[1..*]) : returns LocationsQueryResponse:LocationsQueryR</div>
Purpose of the Interface	Provide list of Stop Place within a given radius of a Location
Requestor:	Travel Shopping (Travel Shopping component)
Provider	Location Resolver
Description:	Provide list of Stop Place within a given radius of a Location
Preconditions:	Valid LocationQuery
Postconditions:	Zero, one or more StopPlace returned
Exchange Items	
Exceptions:	Invalid request
Notes and Issues:	

### Interface 3 - Travel Expert Resolver

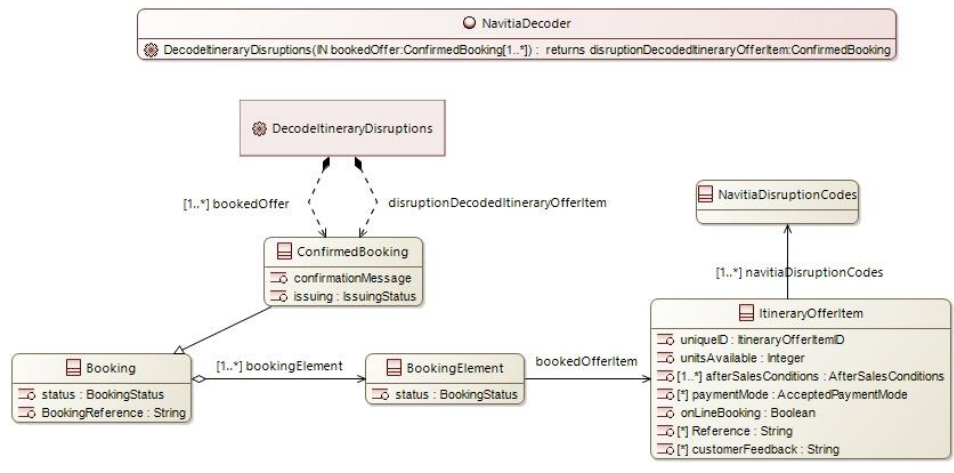

<b>Interface ID:</b>	3
<b>Interface Name:</b>	<div>  TravelExpertResolver         </div> <div>  Get Travel Experts (IN Routing items:Meta Travel Expert Episode[1..*]) : returns Routing items with Travel Expert:Meta Travel Expert Episode         </div>
<b>Purpose of the Interface</b>	Associate Meta Travel Expert Episode with corresponding Travel Expert service descriptors
<b>Requestor:</b>	Travel Shopping (Travel Shopping Components)
<b>Provider</b>	Travel Expert Resolver
<b>Description:</b>	Associate Meta Travel Expert Episode with corresponding Travel Expert service descriptors
<b>Preconditions:</b>	Valid Meta Travel Expert request
<b>Postconditions:</b>	Zero, one or more Travel Expert service descriptors are associated with input Meta Travel Expert Episode
<b>Exchange Items</b>	<div>  TravelExpertResolver         </div> <div>  getTravelExpertsList(IN Routing items:Meta Route[1..*]) : returns Routing items with Travel Expert:Meta Route         </div> 
<b>Exceptions:</b>	Invalid request
<b>Notes and Issues:</b>	Additional notes, issues and comments

### Interface 4 - Network Statistics

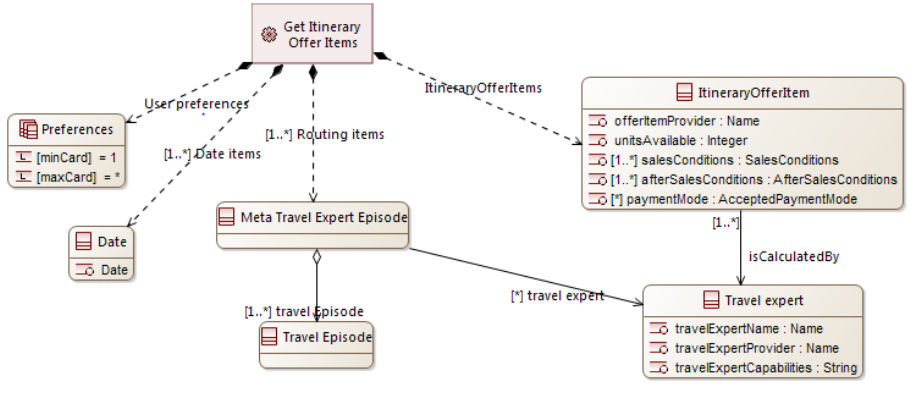

<b>Interface ID:</b>	4
<b>Interface Name:</b>	
<b>Purpose of the Interface</b>	Provide Network data statistic as a list RouteLinks with associated statistics information Provide list of Travel Experts registered in Semantic Web Service Registry
<b>Requestor:</b>	Travel Shopping (Travel Shopping component)
<b>Provider</b>	Network Graph Manager
<b>Description:</b>	getStatisticalData operation: Provide Network data statistic as a list RouteLinks with associated statistics information getTravelExpertList operation: Provide list of Travel Experts registered in Semantic Web Service Registry
<b>Preconditions:</b>	getStatisticalData operation: Travel Expert Id getTravelExpertList: none
<b>Postconditions:</b>	getStatisticalData operation: zero or more RouteLinks with associated statistics getTravelExpertList operation: zero or more TravelExpertID
<b>Exchange Items</b>	
<b>Exceptions:</b>	Invalid request
<b>Notes and Issues:</b>	

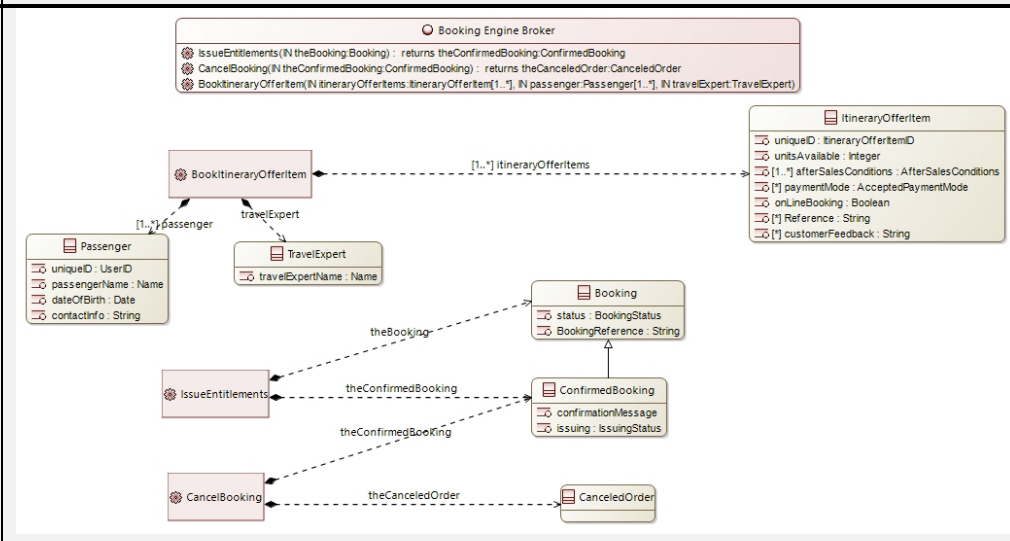

### Interface 5 - Navitia Decoder

<b>Interface ID:</b>	5
<b>Interface Name:</b>	<div> <div>NavitiaDecoder</div> <div>DecodetineraryDisruptions(IN bookedOffer:ConfirmedBooking[1..*]) : returns disruptionDecodedItineraryOfferItem:ConfirmedBooking</div> </div>
<b>Purpose of the Interface</b>	Return Decode Confirmed Booking ItineraryOfferItem Stop Place and Transportation Vehicle data elements in the Navitia coding convention
<b>Requestor:</b>	Trip Trackler
<b>Provider</b>	Disruption Navitia Decoder
<b>Description:</b>	Provide codes in the Navitia convention for elements of the itineraries of a Confirmed Booking
<b>Preconditions:</b>	Valid Confirmed Booking
<b>Postconditions:</b>	Confirmed Booking itinerary associated with Navitia codes
<b>Exchange Items</b>	 <pre> classDiagram     class DecodetineraryDisruptions {         +DecodetineraryDisruptions(IN bookedOffer:ConfirmedBooking[1..*]) : returns disruptionDecodedItineraryOfferItem:ConfirmedBooking     }     class ConfirmedBooking {         +confirmationMessage         +issuing : IssuingStatus     }     class Booking {         +status : BookingStatus         +BookingReference : String     }     class BookingElement {         +status : BookingStatus     }     class ItineraryOfferItem {         +uniqueID : ItineraryOfferItemID         +unitsAvailable : Integer         +afterSalesConditions : AfterSalesConditions         +paymentMode : AcceptedPaymentMode         +onLineBooking : Boolean         +Reference : String         +customerFeedback : String     }     class NavitiaDisruptionCodes {     }      DecodetineraryDisruptions --&gt; ConfirmedBooking : [1..*] bookedOffer     ConfirmedBooking --&gt; DecodetineraryDisruptions : disruptionDecodedItineraryOfferItem     ConfirmedBooking --&gt; Booking : [1..*] bookingElement     Booking --&gt; BookingElement : [1..*] bookingElement     BookingElement --&gt; ItineraryOfferItem : bookedOfferItem     ItineraryOfferItem --&gt; NavitiaDisruptionCodes : [1..*] navitiaDisruptionCodes     </pre>
<b>Exceptions:</b>	Invalid Confirmed Booking
<b>Notes and Issues:</b>	

## Interface 6 - Travel Expert Broker

<b>Interface ID:</b>	6
<b>Interface Name:</b>	<div>  TravelExpert Broker </div> <div>  Get Itinerary Offer Items(IN Routing items:Meta Travel Expert Episode[1..*], IN Date items:Date[1..*], IN User preferences:Preferences) : returns ItineraryOfferItems:ItineraryOfferItem </div>
<b>Purpose of the Interface</b>	Provide a proxy to external, heterogeneous Travel Experts for shopping
<b>Requestor:</b>	Offer Builder (Travel Shopping Component)
<b>Provider</b>	Semantic Broker
<b>Description:</b>	Return ItineraryOfferItems for Meta Travel Expert Episodes from external, heterogeneous Travel Experts
<b>Preconditions:</b>	Travel Expert ontology and mappings loaded in Broker Ontology Manager
<b>Postconditions:</b>	Zero, one or more ItineraryOfferItem returned
<b>Exchange Items</b>	 <pre> classDiagram     class Preferences {         minCard = 1         maxCard = *     }     class Date {         Date     }     class MetaTravelExpertEpisode {         &lt;&lt;abstract&gt;&gt;     }     class ItineraryOfferItem {         offerItemProvider : Name         unitsAvailable : Integer         salesConditions : SalesConditions         afterSalesConditions : AfterSalesConditions         paymentMode : AcceptedPaymentMode     }     class TravelExpert {         travelExpertName : Name         travelExpertProvider : Name         travelExpertCapabilities : String     }      Preferences ..&gt; MetaTravelExpertEpisode : [1..*] Date items     Date ..&gt; MetaTravelExpertEpisode : [1..*] Date items     MetaTravelExpertEpisode ..&gt; ItineraryOfferItem : ItineraryOfferItems     MetaTravelExpertEpisode ..&gt; TravelExpert : [1..*] travel episode     TravelExpert ..&gt; ItineraryOfferItem : [1..*] isCalculatedBy     </pre>
<b>Exceptions:</b>	Missing mappings or schemas, unreachable or unavailable external Travel Experts
<b>Notes and Issues:</b>	

## Interface 7 - Booking Engine Broker

Interface ID:	7
Interface Name:	<div>  Booking Engine Broker         <ul style="list-style-type: none"> <li>IssueEntitlements(IN theBooking:Booking) : returns theConfirmedBooking:ConfirmedBooking</li> <li>CancelBooking(IN theConfirmedBooking:ConfirmedBooking) : returns theCanceledOrder:CanceledOrder</li> <li>BookItineraryOfferItem(IN itineraryOfferItems:ItineraryOfferItem[1..*], IN passenger:Passenger[1..*], IN travelExpert:TravelExpert)</li> </ul> </div>
Purpose of the Interface	Provide a proxy to external, heterogeneous Travel Experts for booking
Requestor:	Booking Orchestrator (Booking and Ticketing Component)
Provider	Semantic Broker
Description:	Return Booking (inventory lock), Confirmed Booking with Entitlements or Booking Cancellation
Preconditions:	Travel Expert ontology and mappings loaded in Broker Ontology Manager
Postconditions:	Zero, one or more Booking, Confirmed Booking or Cancelled Booking returned
Exchange Items	
Exceptions:	Missing mappings or schemas, unreachable or unavailable external Travel Experts
Notes and Issues:	

## 4.2.2 Travel Shopping interfaces

This is the list of functional exchanges provided by the shopping:

Name	Purpose
<b>Mobility Request Manager</b>	
Interface 8 – Send Mobility Request	This functional exchange provides the mobility request
<b>Shopping Orchestrator</b>	
Interface 9 – Send Mobility Request with Traveller Preferences	This functional exchange provides the mobility request with the customer preferences
Interface 10 – Decode Mobility Request	This functional exchange retrieves the list of stop places
<b>Meta Route Explorer</b>	
Interface 11 – Send Mobility Request with Stop Places	This functional exchange provides the mobility request with the list of associated stop places
<b>Offer Builder</b>	
Interface 12 – Send Mobility Request with Traveller Preferences, Smartest Routes and Travel Experts List	This functional exchange provides the mobility request with the customer preferences, the list of associated stop places and the list of associated travel experts
Interface 13 – Get Offer Item List	This functional exchange is used to Get Offers from a specific Travel Expert, for the Meta Travel Expert Episodes relevant to this Travel Expert;

## Mobility Request Manager

This Component provides one Interface to IT2Rail compliant systems;

### ***Interface 8 - Send Mobility Request***

<b>Interface ID:</b>	8
<b>Interface Name:</b>	Send Mobility Request
<b>Purpose of the Interface</b>	This Interface receives a mobility request from the Travel Companion
<b>Requestor:</b>	TC Shopping (PA)
<b>Provider</b>	TS Manage Mobility Request
<b>Description:</b>	This Interface receives a mobility request from a Traveller who is using the Travel Companion mobile app;
<b>Preconditions:</b>	A traveller wants to know more information regarding specific itineraries; A mobility request is issued by the Travel Companion mobile app;
<b>Postconditions:</b>	The Mobility Request Manager retrieves user preferences from Travel Companion Cloud then a mobility request enriched with Traveller Preferences is sent to the Travel Shopping Orchestrator;
<b>Request / Input</b>	Mobility Request (see Capella Model)
<b>Response / Output</b>	ItinerayOffer (see Capella Model)
<b>Exceptions:</b>	
<b>Notes and Issues:</b>	

## Shopping Orchestrator

This function provides two Interfaces to IT2Rail compliant systems;

### ***Interface 9 - Send Mobility Request with Traveller Preferences***

<b>Interface ID:</b>	9
<b>Interface Name:</b>	Send Mobility Request with Traveller Preferences
<b>Purpose of the Interface</b>	This Interface sends a mobility request enriched with user preferences;
<b>Requestor:</b>	TS Manage Mobility Request
<b>Provider</b>	TS Orchestrate Shopping
<b>Description:</b>	This Interface sends a mobility request along with user preferences to the Shopping Orchestrator;
<b>Preconditions:</b>	The Mobility Request Manager collected user preferences from Travel Companion;
<b>Postconditions:</b>	A mobility request with traveller preferences is forwarded to the Travel Shopping Orchestrator in order to decode the mobility query;
<b>Request / Input</b>	Date, MetaJourney, PreferenceCollection (see Capella Model)
<b>Response / Output</b>	ItineraryOffer (see Capella Model)
<b>Exceptions:</b>	
<b>Notes and Issues:</b>	

### Interface 10 - Decode Mobility Request

<b>Interface ID:</b>	10
<b>Interface Name:</b>	Decode Mobility Request
<b>Purpose of the Interface</b>	Decode locations
<b>Requestor:</b>	TS Orchestrate Shopping
<b>Provider</b>	TS Decode Mobility Request
<b>Description:</b>	Provide list of Stop Place within a given radius of an identified Location
<b>Preconditions:</b>	Valid LocationQuery with Identified Location
<b>Postconditions:</b>	Zero, one or more StopPlace returned
<b>Request / Input</b>	<b>Location Query</b> (see Capella Model)
<b>Response / Output</b>	<b>LocationsQueryResponse</b> (see Capella Model)
<b>Exceptions:</b>	Invalid request
<b>Notes and Issues:</b>	Additional notes, issues and comments

## Meta Route Explorer

This function provides one Interface to IT2Rail compliant systems;

### *Interface 11 - Send Mobility Request with Stop Places*

<b>Interface ID:</b>	11
<b>Interface Name:</b>	Send Mobility Request with Stop Places
<b>Purpose of the Interface</b>	To provide a list of meta routes
<b>Requestor:</b>	TS Orchestrate Shopping
<b>Provider</b>	TS Select Smartest Routes
<b>Description:</b>	The service provides a list of meta routes to reach an end point from a start point for each meta journey requested;
<b>Preconditions:</b>	<p>The travel shopping orchestrator provides a mobility query containing:</p> <ul style="list-style-type: none"> <li>• A list of Meta journeys; For each Meta journey, the user needs to precise the origin and destination points with the nearest Stop Places;</li> <li>• Possibly travellers' information and search options;</li> </ul>
<b>Postconditions:</b>	The process provides the list of smartest routes covering the meta journey requested;
<b>Request / Input</b>	<b>Date, StopPlaceCode, MetaJourney, PreferenceCollection</b> (see Capella Model)
<b>Response / Output</b>	<b>Date, StopPlaceCode, MetaJourney, MetaRoutes</b> (see Capella Model)
<b>Exceptions:</b>	
<b>Notes and Issues:</b>	

## Offer Builder

This function provides three Interfaces to IT2Rail compliant systems;

### ***Interface 12 - Send Mobility Request with Traveller Preferences, Smartest Routes and Travel Experts List***

<b>Interface ID:</b>	12
<b>Interface Name:</b>	Send Mobility Request with Traveller Preferences, Smartest Routes and Travel Experts List
<b>Purpose of the Interface</b>	To return a list of aggregated itinerary offers
<b>Requestor:</b>	TS Orchestrate Shopping
<b>Provider</b>	TS Build Offer
<b>Description:</b>	To return a list of aggregated itinerary offers with transport number, schedule and price
<b>Preconditions:</b>	The travel shopping orchestrator provides a request containing a list of smartest routes and the travel experts to call for each route;
<b>Postconditions:</b>	The process returns a list of aggregated itinerary offers;
<b>Request / Input</b>	<b>Meta Route, TravelExpert, Date, PreferenceCollection</b> (see Capella Model)
<b>Response / Output</b>	<b>ItineraryOffer</b> (see Capella Model)
<b>Exceptions:</b>	
<b>Notes and Issues:</b>	

**Interface 13 - Provide Offer Detail For Offer Display**

<b>Interface ID:</b>	13
<b>Interface Name:</b>	Provide Itinerary Offer Details
<b>Purpose of the Interface</b>	This Interface provides itinerary offer details
<b>Requestor:</b>	Ticketing & Booking: BT Orchestrate Booking
<b>Provider</b>	TS Build Offer
<b>Description:</b>	The Offer Builder temporary stores itinerary offer details; These details are used by other WP;
<b>Preconditions:</b>	An application requests details related to a given itinerary offer;
<b>Postconditions:</b>	Itinerary offer details are provided to the requestor
<b>Request / Input</b>	<b>ItineraryOfferRefID</b> (see Capella Model)
<b>Response / Output</b>	<b>ItineraryOffer</b> (see Capella Model)
<b>Exceptions:</b>	
<b>Notes and Issues:</b>	

### 4.2.3 Booking & Ticketing interfaces

The following table displays the list of operations available per interface; The “Name” column is the name of the interface followed by “:” and the name of the operation; This is the list of interfaces provided by the Booking & Ticketing;

Name	Purpose
<b>Manage Entitlement Token</b>	
Interface 14 ManageBookingEntitlementTokenI:putEntitlementTokenCW	This interface should be invoked by the Travel Companion to store the entitlement token in the CW
Interface 15 – ManageBookingEntitlementTokenI:updateTokenCW	This interface should be invoked by the Travel Companion to update the stored token in the CW
Interface 16 – ManageBookingEntitlementTokenI:putBookingCW	This interface should be invoked by the Travel Companion to store the booking in the CW
<b>Manage Booking</b>	
Interface 17 – ManageBookingI:BookItineraryOffer	This interface should be invoked to book an itinerary offer;
Interface 18 – ManageBookingI:LockInventory	This interface should be invoked to book a capacity constrained offer item
Interface 19 – PayBookingAndIssueEntitlementI:Pay&IssueItineraryOffer	This interface should be invoked to pay and issue an itinerary offer;
Interface 20 – PayBookingAndIssueEntitlementI:GenerateEntitlementsTokens	This interface should be invoked to issue the Entitlements and Tokens of a GuaranteedPriceBooking;
Interface 21 – PayBookingAndIssueEntitlementI:CancelEntitlementsTokens	This interface should be invoked to cancel an entitlement, and therefore all associated tokens;
<b>Validate Token B&amp;T</b>	
Interface 22 – ManagePayloadI:GetPayload	The interface implements the interaction between the Travel Companion and the BT Validation Engine
Interface 23 – ManagePayloadI:UpdatePayload	The interface implements the interaction between the Travel Companion and the BT Validation Engine
Interface 24 – ConsumePayloadI:ValidateAndConsumeToken	The interface implements the interaction between the BT Validation Engine and the BT Consumption Engine;

Name	Purpose
<b>Manage Entitlement Token</b>	
Interface 25 – AlterTokenI:AlterToken	The interface implements the interaction between the BT Validation Engine and the BT Update Token;
<b>Publish Ticketing Data</b>	
Interface 26 – TicketingPublishingI:PublishTopologies	This interface provides the current ticketing logical and physical topologies;
Interface 27 – TicketingPublishingI:PublishFareProductsAndRulesDescriptions	This interface should be invoked to provide the current description of fare products and fare rules;
Interface 28 – TicketingPublishingI:PublishFareProductsAndRules	This interface should be invoked to provide the current list of fare products and fare rules;
<b>Manage Offer Item</b>	
Interface 29 – ManageOfferItemI:GetOfferItemList	This interface should be invoked to retrieve the list of available offer items;
Interface 30 – ManageOfferItemI:UpdateOfferItem	This interface should be invoked to update an OfferItem with an altered CustomizationParameters;
Interface 31 – ManageOfferItemI:GetPrice	This interface should be invoked to price an available itinerary offer item;
<b>Manage Payment</b>	
Interface 32 – ManagePaymentI:BeginPaymentTransaction	This interface should be invoked to start the two-step payment process;
Interface 33 – ManagePaymentI:VerifyAuthZCode	This interface updates the PaymentReferenceList with information from a trusted PaymentEngine;
Interface 34 – ManagePaymentI:AuthorizePayment	This interface should be invoked to request the authorization of the payment in the two-step payment process;
Interface 35 – ManagePaymentI:SettlePayment	This interface is to settle the payment;

## Manage Entitlement Token

This Component provides three interfaces to IT2Rail compliant systems;

### ***Interface 14 - ManageBookingEntitlementToken:putEntitlementTokenCW***

<b>Interface ID:</b>	14		
<b>Interface Name:</b>	putEntitlementTokenCW		
<b>Purpose of the Interface</b>	This interface should be invoked by the Travel Companion to store the entitlement token in the CW		
<b>Requestor:</b>	Travel Companion		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked by the Travel Companion to store the entitlement token in the CW		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	GuaranteedPriceBooking	M	A booking where all booked ItineraryOfferItem's prices are guaranteed
	Entitlement	M	The contract stipulated between the Offer Provider and the Customer for the associated ItineraryOfferItem
	Token List	M	The list (array) of token (ID);
	UserIDToken	M	The UserIDToken is the pointer identifying a unique token associated to a customer
<b>Response / Output</b>	ReturnStatus		OK/KO/Access Denied/Technical Error
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

**Interface 15 - ManageBookingEntitlementTokenI:updateTokenCW**

<b>Interface ID:</b>	15		
<b>Interface Name:</b>	updateTokenCW		
<b>Purpose of the Interface</b>	This interface should be invoked by the Travel Companion to update the stored token in the CW		
<b>Requestor:</b>	Travel Companion		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked by the Travel Companion to update the stored token in the CW		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Token	M	The expression of an entitlement in an involved organization used to perform the trip
	ValidationContext	M	The context of the validation
	TokenID	M	The TokenID is the pointer identifying a unique token
	EventDateTime	M	The time stamp of the occurred event
	UserIDToken	M	The UserIDToken is the pointer identifying a unique token associated to a customer
<b>Response / Output</b>	ReturnStatus		OK/KO/Access Denied/Technical Error
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

**Interface 16 - ManageBookingEntitlementTokenI:putBookingCW**

<b>Interface ID:</b>	16		
<b>Interface Name:</b>	putBookingCW		
<b>Purpose of the Interface</b>	This interface should be invoked by the Travel Companion to store the booking in the CW		
<b>Requestor:</b>	Travel Companion		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked by the Travel Companion to store the booking in the CW		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	BookingID	M	The BookingID is the pointer identifying a unique booking
	UserIDToken	M	The UserIDToken is the pointer identifying a unique token associated to a customer
<b>Response / Output</b>			
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

## Manage Booking

This Component provides five interfaces to IT2Rail compliant systems;

### ***Interface 17 - ManageBookingI:BookItineraryOffer***

<b>Interface ID:</b>	17		
<b>Interface Name:</b>	BookItineraryOffer		
<b>Purpose of the Interface</b>	This interface should be invoked to book an itinerary offer;		
<b>Requestor:</b>	Travel Companion		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to book an itinerary offer;		
<b>Preconditions:</b>	An itinerary offer has been chosen by the passenger (traveller);		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	ItineraryOfferRefID	M	URL pointing to the Valued Itinerary Offer that the customer chose to book and pay for; The offer to be booked;
	Passenger List	M	The list (array) of passenger (ID);
	DeviceTokenID	M	The DeviceTokenID is the pointer identifying a unique device
<b>Response / Output</b>	BookingID	M	The BookingID is the pointer identifying a unique booking
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

### Interface 18 - ManageBookingLockInventory

<b>Interface ID:</b>	18		
<b>Interface Name:</b>	LockInventory		
<b>Purpose of the Interface</b>	This interface should be invoked to book a capacity constrained offer item		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to book a capacity constrained offer item;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	ItineraryOfferItem List	M	The list (array) of itinerary offer item
	Passenger List	M	The list (array) of passenger (ID)
	DeviceTokenID	M	The DeviceTokenID is the pointer identifying a unique device
	BookingEngine	M	An URL to the booking engine
<b>Response / Output</b>	BookingElements	M	BookingElement linked to the initial OfferItem
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	The output of this interface should not be cached		

**Interface 19 - PayBookingAndIssueEntitlementl:Pay&IssueltninaryOffer**

<b>Interface ID:</b>	19		
<b>Interface Name:</b>	Pay&IssueltninaryOffer		
<b>Purpose of the Interface</b>	This interface should be invoked to pay and issue an itinerary offer;		
<b>Requestor:</b>	Travel Companion		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to pay and issue an itinerary offer;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	FormOfPayment	M	The type of the payment process
	BookingID	M	The BookingID is the pointer identifying a unique booking
	UserIDToken	M	The UserIDToken is the pointer identifying a unique token associated to a customer
<b>Response / Output</b>	Boolean	M	OK/KO
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

## Interface 20 - PayBookingAndIssueEntitlementTokens:Generate Entitlements Tokens

<b>Interface ID:</b>	20		
<b>Interface Name:</b>	Generate Entitlements Tokens		
<b>Purpose of the Interface</b>	This interface should be invoked to issue the Entitlements and Tokens of a GuaranteedPriceBooking;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to issue the Entitlements of a GuaranteedPriceBooking; The Entitlement should be issued only if the PaymentReferenceList complies with the business rules (there should be no blocking payment); The issuing of the entitlement is contractually binding the customer with his/her providers;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Passenger List	M	The list (array) of passenger (ID)
	ItineraryOfferItem List	M	The list (array) of itinerary offer item
	BookingElements	M	ID of the BookingElement being paid;
	ShoppingRequestContext	M	Information specific to the current shopping request
<b>Response / Output</b>	Entitlement List	M	The list (array) of entitlement; The contract stipulated between the Offer Provider and the Customer for the associated ItineraryOfferItem
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	This interface has been merged with the Generate Entitlement as the issuing of the entitlement may occurs before the Token issuing;		

### Interface 21 - PayBookingAndIssueEntitlementID: Cancel Entitlements Tokens

<b>Interface ID:</b>	21		
<b>Interface Name:</b>	Cancel Entitlements Tokens		
<b>Purpose of the Interface</b>	This interface should be invoked to cancel an entitlement, and therefore all associated tokens;		
<b>Requestor:</b>	Travel Companion		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to cancel an entitlement, and therefore all associated tokens;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	EntitlementID List	M	The list (array) of entitlement (ID); The EntitlementID is the pointer identifying a unique Entitlement;
<b>Response / Output</b>			
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

## Validate Token B&T

This Component provides four interfaces to IT2Rail compliant systems;

### ***Interface 22 - ManagePayloadl:GetPayload***

<b>Interface ID:</b>	22		
<b>Interface Name:</b>	GetPayload		
<b>Purpose of the Interface</b>	The interface implements the interaction between the Travel Companion and the BT Validation Engine		
<b>Requestor:</b>	TC Tapping Module (PA) (Travel Companion Component)		
<b>Provider</b>	BT Validation Engine		
<b>Description:</b>	Retrieve Token and its Payload from Travel Companion		
<b>Preconditions:</b>	Validate Token (Preparation) is complete, tapping module identified and loaded, Traveller presents appropriate embodiment		
<b>Postconditions:</b>	Token's payload is retrieved		
<b>Request / Input</b>			
<b>Response / Output</b>	Payload	M	Is a collection of bytes meaning that a token is able to be used for validation;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

**Interface 23 - ManagePayload:UpdatePayload**

<b>Interface ID:</b>	23		
<b>Interface Name:</b>	UpdatePayload		
<b>Purpose of the Interface</b>	The interface implements the interaction between the Travel Companion and the BT Validation Engine		
<b>Requestor:</b>	TC Tapping Module (PA) (Travel Companion Component)		
<b>Provider</b>	BT Validation Engine		
<b>Description:</b>	Retrieve Token and its Payload from Travel Companion		
<b>Preconditions:</b>	Validate Token (Preparation) is complete, tapping module identified and loaded, Traveller presents appropriate embodiment		
<b>Postconditions:</b>	Token's payload is retrieved		
<b>Request / Input</b>	Payload	M	Is a collection of bytes meaning that a token is able to be used for validation;
<b>Response / Output</b>			
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

**Interface 24 - ConsumePayloadI:ValidateAndConsumeToken**

<b>Interface ID:</b>	24		
<b>Interface Name:</b>	ValidateAndConsumeToken		
<b>Purpose of the Interface</b>	The interface implements the interaction between the BT Validation Engine and the BT Consumption Engine		
<b>Requestor:</b>	BT Validation Engine		
<b>Provider</b>	BT Consumption Engine		
<b>Description:</b>	Submit token's payload and validation context to validation		
<b>Preconditions:</b>	Token payload retrieved and Validation Context created		
<b>Postconditions:</b>	Validation Status and updated Payload are returned;		
<b>Request / Input</b>	ValidationContext	M	Complementary information needed to analyse the Payload
	Payload	M	Is a collection of bytes meaning that a token is able to be used for validation;
<b>Response / Output</b>	ValidationStatus	M	The status of the validation of the token
	Payload	M	Is a collection of bytes meaning that a token is able to be used for validation;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

**Interface 25 - *AlterTokenI:AlterToken***

<b>Interface ID:</b>	25		
<b>Interface Name:</b>	AlterToken		
<b>Purpose of the Interface</b>	The interface implements the interaction between the BT Validation Engine and the BT Update Token		
<b>Requestor:</b>	BT Validation Engine		
<b>Provider</b>	BT Update Token		
<b>Description:</b>	Alter token with updated payload		
<b>Preconditions:</b>	ValidationStatus indicates passed validation		
<b>Postconditions:</b>	Token successfully retrieved and altered with updated payload;		
<b>Request / Input</b>	ValidationTransaction	M	The ValidationTransaction knows if the token is effective
	TokenID	M	The TokenID is the pointer identifying a unique token
<b>Response / Output</b>	ReturnStatus		OK/KO/Access Denied/Technical Error
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

## Publish Ticketing Data

This Component provides three interfaces to IT2Rail compliant systems;

### ***Interface 26 - TicketingPublishingI:PublishTopologies***

<b>Interface ID:</b>	26		
<b>Interface Name:</b>	PublishTopologies		
<b>Purpose of the Interface</b>	This interface provides the current ticketing logical and physical topologies;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to provide the current ticketing logical and physical topologies after a change of topology elements in ticketing systems;		
<b>Preconditions:</b>	A Topology must have been versioned;		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Logical topology	M	Format dependant logical topology;
	Physical topology	M	Format dependant physical topology;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

## Interface 27 - TicketingPublishingI:PublishFareProductsAndRulesDescriptions

<b>Interface ID:</b>	27		
<b>Interface Name:</b>	PublishFareProductsAndRulesDescriptions		
<b>Purpose of the Interface</b>	This interface should be invoked to provide the current description of fare products and fare rules;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to provide the current description of fare products and fare rules, after a change in fare product or rules in ticketing systems;		
<b>Preconditions:</b>	Fare sets must have been versioned and validated for publishing;		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Fare Rules Description	M	Description of the current fare rules
	FareProductDescription	M	Description of the current fare products
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

### Interface 28 - TicketingPublishingI:PublishFareProductsAndRules

<b>Interface ID:</b>	28		
<b>Interface Name:</b>	PublishFareProductsAndRules		
<b>Purpose of the Interface</b>	This interface should be invoked to provide the current list of fare products and fare rules;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to provide the current list of fare products and fare, after a change in fare product or rules in ticketing systems;		
<b>Preconditions:</b>	Fare sets must have been versioned and validated for publishing;		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Fare Rules	M	Fare rules in the internal ticketing system format
	FareProduct	M	Fare products rules in the internal ticketing system format
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

## Manage Offer Item

This Component provides three interfaces to IT2Rail compliant systems;

### ***Interface 29 - ManageOfferItem: GetOfferItemList***

<b>Interface ID:</b>	29		
<b>Interface Name:</b>	GetOfferItemList		
<b>Purpose of the Interface</b>	This interface should be invoked to retrieve the list of available offer items;		
<b>Requestor:</b>	Shopping		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to retrieve the list of available ItineraryOfferItems that may be used to build an itinerary offer for the customer to provide transportation solution for the passengers on the considered itinerary;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Itinerary	M	The itinerary considered
	Customer	M	The customer for which the offer is constructed;
	UserID List	O	The list (array) of user (ID);
	Retailer	O	The retailer that will sell the Fare product;
<b>Response / Output</b>	ItineraryOfferItem	M	The initial ItineraryOfferItem;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	The output of this interface may be cached for further use until new operational parameters are published;		

**Interface 30 - ManageOfferItem:UpdateOfferItem**

<b>Interface ID:</b>	30		
<b>Interface Name:</b>	UpdateOfferItem		
<b>Purpose of the Interface</b>	This interface should be invoked to update an OfferItem with an altered CustomizationParameters;		
<b>Requestor:</b>	Shopping		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to update an ItineraryOfferItem with an altered CustomizationParameters; No other alteration of an ItineraryOfferItem should be allowed;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	Itinerary	M	The itinerary considered;
	Customer	M	The customer for which the offer is constructed;
	UserID	M	The UserID is the pointer identifying a unique customer
	Retailer	M	The retailer that will sell the Fare product;
	ItineraryOfferItem	M	The itinerary offer item to update;
<b>Response / Output</b>	ItineraryOfferItem	M	The updated ItineraryOfferItem;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	The output of this interface should not be cached;		

### Interface 31 - ManageOfferItem: GetPrice

<b>Interface ID:</b>	31		
<b>Interface Name:</b>	GetPrice		
<b>Purpose of the Interface</b>	This interface should be invoked to price an available itinerary offer item;		
<b>Requestor:</b>	Shopping		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to price an available itinerary offer item		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	ItineraryOfferItem	M	The itinerary offer item to be priced
<b>Response / Output</b>	GlobalQuotation	M	The price of the itinerary order item that may be proposed to the customer for the passenger on this itinerary;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	The output of this interface should not be cached;		

## Manage Payment

This Component provides four interface to IT2Rail compliant systems;

### ***Interface 32 - ManagePaymentI:BeginPaymentTransaction***

<b>Interface ID:</b>	32		
<b>Interface Name:</b>	BeginPaymentTransaction		
<b>Purpose of the Interface</b>	This interface should be invoked to start the two-step payment process;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to start the two-step payment process; The provider of the interface must check the availability if needed of the Payment Module;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	FormsOfPayment	M	Payment means considered
<b>Response / Output</b>	TransactionID	M	ID of the transaction, created from the BeginPaymentTransaction interface;
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

### Interface 33 - ManagePaymentI:VerifyAuthZCode

<b>Interface ID:</b>	33		
<b>Interface Name:</b>	VerifyAuthZCode		
<b>Purpose of the Interface</b>	This interface updates the PaymentReferenceList with information from a trusted PaymentEngine;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface updates the PaymentReferenceList with information from a trusted PaymentEngine; It should be used to verify that the authorization code provided to issue the entitlement or token is legitimate and still valid;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	FormsOfPayment	M	Payment means considered
	PaymentReferenceList	O	Existing payment reference list
<b>Response / Output</b>	PaymentReferenceList	M	Updated payment reference list
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

### Interface 34 - ManagePaymentI:AuthorizePayment

<b>Interface ID:</b>	34		
<b>Interface Name:</b>	AuthorizePayment		
<b>Purpose of the Interface</b>	This interface should be invoked to request the authorization of the payment in the two-step payment process;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface should be invoked to request the authorization of the payment in the two-step payment process; The client of the interface must use the Payment Progress element of the PaymentReferenceList to monitor the progress of the payment process;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	FormsOfPayment	M	Payment means considered
	TransactionID	M	ID of the transaction, created from the BeginPaymentTransaction interface;
	BookingElementID	M	ID of the BookingElement being paid;
<b>Response / Output</b>			
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

**Interface 35 - ManagePaymentI:SettlePayment**

<b>Interface ID:</b>	35		
<b>Interface Name:</b>	SettlePayment		
<b>Purpose of the Interface</b>	This interface is to settle the payment;		
<b>Requestor:</b>	Booking & Ticketing		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface settles the payment (transferring the amount charged from the customer account to the merchant account) and updates the PaymentReferenceList to reflect the status of the settlement;		
<b>Preconditions:</b>	None		
<b>Postconditions:</b>	None		
<b>Request / Input</b>	FormsOfPayment	M	Payment means considered
	PaymentReferenceList	M	Payment reference list
<b>Response / Output</b>	PaymentReferenceList	M	Updated PaymentReference List
<b>Exceptions:</b>	None		
<b>Notes and Issues:</b>	None		

#### 4.2.4 Trip Tracker interfaces

The list of interfaces

Name	Purpose
Interface 36 – BAdataAlternatives	Exchange of logged alternatives data between the Trip Tracker and the Business Analytics;
Interface 37 - BAdataCEP	Exchange of logged CEP data between the Trip Tracker and the Business Analytics;
Interface 38 - CallAlternatives	Triggering journey recalculation
Interface 39 - DecodeltineraryDisruptions	Decoding of the event structure provided by the Navitia platform
Interface 40 - GetAlternatives	The request for alternatives calculation
Interface 41 - RequestJourneyTracking	Triggering request for activation of given journey tracking

##### **Interface 36 - BAdataAlternatives**

Interface name	BAdataAlternatives		
Description	Exchange of logged alternatives data between the Trip Tracker and the Business Analytics;		
Requestor	BA Data Collection		
Provider	TT OrchestrateBA		
Release	CREL	AREL	FREL
			Complete
Pre-conditions	Logging of alternatives data		
Post-conditions	Further processing in the Business Analytics		
Request / Input			
Response / Output	AverageStops		
	MaximumPrice		
	MinimumPrice		
	NumberAlternatives		
	ProcessingTime		
	TransportationMode		

	TravelMaximumTime
	TravelMinimumTime
<b>Exceptions</b>	
<b>Notes</b>	

### Interface 37 - BAdataCEP

<b>Interface name</b>	<b>BAdataCEP</b>		
<b>Description</b>	Exchange of logged CEP data between the Trip Tracker and the Business Analytics;		
<b>Requestor</b>	BA Data Collection		
<b>Provider</b>	TT OrchestrateBA		
<b>Release</b>	<b>CREL</b>	<b>AREL</b>	<b>FREL</b>
			Complete
<b>Pre-conditions</b>	Logging of CEP data		
<b>Post-conditions</b>	Further processing in the Business Analytics		
<b>Request / Input</b>	Date		
<b>Response / Output</b>	ArrivalDelayEvent		
	ArrivalDelayEventRules		
	DepartureDelayEvent		
	DepartureDelayEventRules		
	RulesDeactivationRequest		
<b>Exceptions</b>			
<b>Notes</b>			

### Interface 38 - CallAlternatives

<b>Interface name</b>	<b>CallAlternatives</b>		
<b>Description</b>	Triggering journey recalculation		
<b>Requestor</b>	TC AlertManagement (PA)		
<b>Provider</b>	TT GetAlternatives		
<b>Release</b>	<b>CREL</b>	<b>AREL</b>	<b>FREL</b>
			Complete
<b>Pre-conditions</b>	Request alternatives		
<b>Post-conditions</b>	Get booked offer		
<b>Request / Input</b>	UserID		
	UserIDToken		
	SendMessage		
	GeoCoordinates		
	BookedOfferID		
<b>Response / Output</b>	ItineraryOffer		
<b>Exceptions</b>			
<b>Notes</b>			

**Interface 39 - DecodeltineraryDisruptions**

<b>Interface name</b>	<b>DecodeltineraryDisruptions</b>		
<b>Description</b>	Decoding of the event structure provided by the Navitia platform		
<b>Requestor</b>	TT EventsListening		
<b>Provider</b>	IF Decode Navitia Disruptions		
<b>Release</b>	<b>CREL</b>	<b>AREL</b>	<b>FREL</b>
			Complete
<b>Pre-conditions</b>	Identify available sources of events		
<b>Post-conditions</b>	Invoke listening of Navitia event's source		
<b>Request / Input</b>	ConfirmedBooking		
<b>Response / Output</b>	ConfirmedBooking		
<b>Exceptions</b>			
<b>Notes</b>			

### Interface 40 - *GetAlternatives*

<b>Interface name</b>	<b>GetAlternatives</b>		
<b>Description</b>	The request for alternatives calculation		
<b>Requestor</b>	TT GetAlternatives		
<b>Provider</b>	TS Compute Itinerary Offer Items		
<b>Release</b>	<b>CREL</b>	<b>AREL</b>	<b>FREL</b>
			Complete
<b>Pre-conditions</b>	Get booked offer		
<b>Post-conditions</b>	Check alternatives		
<b>Request / Input</b>	RoutesQuery		
<b>Response / Output</b>	ItineraryOffer		
<b>Exceptions</b>			
<b>Notes</b>			

### Interface 41 - RequestJourneyTracking

<b>Interface name</b>	<b>RequestJourneyTracking</b>		
<b>Description</b>	Triggering request for activation of given journey tracking		
<b>Requestor</b>	TC AlertManagement (PA)		
<b>Provider</b>	TT OrchestrateActivation		
<b>Release</b>	<b>CREL</b>	<b>AREL</b>	<b>FREL</b>
	Partial	Partial	Complete
<b>Pre-conditions</b>	Tracking requested by the Traveller		
<b>Post-conditions</b>	Request preferences retrieval		
<b>Request / Input</b>	ActivationSelector		
	UserID		
	UserIDToken		
	BookedOfferD		
<b>Response / Output</b>	Response		
<b>Exceptions</b>			
<b>Notes</b>			

#### 4.2.5 Travel Companion interfaces

The list of interfaces from the Travel Companion;

Name	Purpose
Interface 42 - Manage Preferences	To provide and group operations concerning the management of user preferences (retrieve and update) by other IT2Rail modules
Interface 43 – Manage Booking Entitlement Token	To provide and group operations concerning the handling (storage, retrieval, and update) of booked offers, entitlements and tokens stored on the TC CW;
Interface 44 - TC2TTrack	To provide and group operations concerning the handling of disruptions (including operations needed for the managing of alternatives in case of disruptions);
Interface 45 – Manage Payment Data	The user token was generated by TC and corresponds to the provided user ID; the creditCardType corresponds to one of the accepted by the system;
Interface 46 – Personal App GUI	This interface is actually a modelling device to capture the operations that the user can perform on the TC PA; As such, the items in this interface are not intended to be implemented methods (though they ultimately correspond to some code), but, rather, actions performed by the user on the PA GUI;

## TC CloudWallet

The interfaces that the TC CW exports towards other IT2Rail modules (TS, BT, TT) are ExportPreferencesI, TC2TtrackI, and ManageBookingEntitlementTokenI; The tables presented in the rest of this section provide some further details concerning these interfaces, and in particular of the operations they export;

### Interface 42 - Manage Preferences

Interface ID:	42		
Interface Name:	ManagePreferencesI		
Purpose of the Interface	To provide and group operations concerning the management of user preferences (retrieve and update) by other IT2Rail modules		
Requestors:	TS, TT		
ProvideAllPreferencesCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID;		
Postconditions:	The preferences returned are all those of the user, with their associated score;		
Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token
Response / Output	preferences	M	List of returned preferences
Exceptions:			
Notes and Issues:			
UpdatePreferencesCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID; The preferences which its values were not sending, will be update to the minimum possible value;		
Postconditions:	The new preference value was being stored in the TC CW;		
Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token

	preferencesList	M	The new preferences that will replace the existing ones;
<b>Response / Output</b>	res	M	List of returned preferences
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			

### Interface 43 - Manage Booking Entitlement Token

Interface ID:	43		
Interface Name:	ManageBookingEntitlementTokenI		
Purpose of the Interface	To provide and group operations concerning the handling (storage, retrieval, and update) of booked offers, entitlements and tokens stored on the TC CW;		
Requestors:	BT		
putBookingCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID;		
Postconditions:	The received booking ID is correctly stored in the TC CW;		
Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token
	booking	M	ID of the booking to be stored
Exceptions:			
Notes and Issues:			
getBookingCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID; the ID received corresponds to a booking stored in the TC CW		
Postconditions:	The booking returned is the one corresponding to the ID received as input		

Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token
	booking	M	ID of the booking to be retrieved
Response / Output	res	M	Booking returned
Exceptions:			
Notes and Issues:			
putEntitlementTokenCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID;		
Postconditions:	The received entitlement and tokens are correctly stored in the TC CW;		
Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token
	booking	M	Booking to which the entitlement and tokens correspond
	entitlement	M	Entitlement to be stored
	tokenList	M	List of tokens to be stored
Response / Output	res	M	Outcome of the storage, whether successful or not
Exceptions:			
Notes and Issues:			
updateTokenCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID; the token to be updated was correctly stored in the TC CW		
Postconditions:	The token is updated in the TC CW;		
Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token
	token	M	Token to be updated
	tokid	M	ID of the token to be updated

	valContext	M	Context in which the validation leading to the update of the token is performed
	currentValues	M	Timestamp of the validation
<b>Response / Output</b>	res	M	Outcome of the update, whether successful or not
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			

### Interface 44 - TC2TTrack

Interface ID:	44		
Interface Name:	TC2TTrackI		
Purpose of the Interface	To provide and group operations concerning the handling of disruptions (including operations needed for the manging of alternatives in case of disruptions);		
Requestors:	TT		
PushMessageCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID; the ID of the booked offer corresponds to an offer stored on the TC CW;		
Postconditions:	The received message is correctly stored in the TC CW;		
Request / Input	userID	M	ID of the user
	userIDToken	M	Authorization token
	message	M	Message with the alert for the user
	bookedOfferID	M	ID of the booked offer to which the message is related
Exceptions:			
Notes and Issues:			
getBookedOfferCW			
Preconditions:	The user token was generated by TC and corresponds to the provided user ID; the ID received corresponds to a booked offer stored in the TC CW		

<b>Postconditions:</b>	The booked offer returned is the one corresponding to the ID received as input		
<b>Request / Input</b>	userID	M	ID of the user
	userIDToken	M	Authorization token
	offerID	M	ID of the booked offer to be retrieved
<b>Response / Output</b>	res	M	Booked offer returned
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			

#### **Interface 45 - Manage Payment Data**

<b>Interface ID:</b>	45		
<b>Interface Name:</b>	ManagePaymentDataI		
<b>Purpose of the Interface</b>	To provide and group operations concerning the handling of the payment data (including operations such as create, update, remove and retrieve);		
<b>Requestors:</b>	TC PA		
<b>AddUserCreditCardCW</b>			
<b>Preconditions:</b>	The user token was generated by TC and corresponds to the provided user ID; the creditCardType corresponds to one of the accepted by the system;		
<b>Postconditions:</b>	The credit card information was stored in the TC CW;		
<b>Request / Input</b>	userID	M	ID of the user
	userIDToken	M	Authorization token
	creditCardType	M	The type of the credit card
	creditCardData	M	All the data related to the Credit card such as number, CVV, expiration date and display name

<b>Exceptions:</b>			
<b>Notes and Issues:</b>			
<b>UpdateUserCreditCardCW</b>			
<b>Preconditions:</b>	The user token was generated by TC and corresponds to the provided user ID; the creditCardType corresponds to one of the accepted by the system and the creditCardData must be related to one that was stored in the TC CW;		
<b>Postconditions:</b>	The credit card information was updated in the TC CW;		
<b>Request / Input</b>	userID	M	ID of the user
	userIDToken	M	Authorization token
	creditCardId	M	ID of the credit card
	creditCardType	M	The type of the credit card
	creditCardData	M	All the data related to the Credit card such as number, CVV, expiration date and display name
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			
<b>removeUserCreditCardCW</b>			
<b>Preconditions:</b>	The user token was generated by TC and corresponds to the provided user ID; the creditCardData must be related to one that was stored in the TC CW;		
<b>Postconditions:</b>	The credit card information was deleted in the TC CW;		
<b>Request / Input</b>	userID	M	ID of the user
	userIDToken	M	Authorization token
	creditCardId	M	ID of the credit card
	creditCardType	M	The type of the credit card
	creditCardData	M	All the data related to the Credit card such as number, CVV, expiration date and display name
<b>Exceptions:</b>			

<b>Notes and Issues:</b>			
<b>removeUserCreditCardCW</b>			
<b>Preconditions:</b>	The user token was generated by TC and corresponds to the provided user ID;		
<b>Postconditions:</b>	The credit card information related to this user was deleted in the TC CW;		
<b>Request / Input</b>	userID	M	ID of the user
	userIDToken	M	Authorization token
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			
<b>getAllUserCreditCardCW</b>			
<b>Preconditions:</b>	The user token was generated by TC and corresponds to the provided user ID;		
<b>Postconditions:</b>	All credit card information related to this user was retrieve from the TC CW;		
<b>Request / Input</b>	userID	M	ID of the user
	userIDToken	M	Authorization token
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			
<b>getAllCardTypesCW</b>			
<b>Preconditions:</b>			
<b>Postconditions:</b>	The credit card types which are accepted in the system;		
<b>Request / Input</b>			
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			

## TC PersonalApplication

As mentioned above, the interfaces that the TC PA exports towards other IT2Rail modules are only two: *PersonalAppGUI*, and *ManagePayloadI* (*AlertMagmtPA\_IntI* is an internal interface used by TC CW, and not by an external service or actor); The tables presented in the rest of this section provide some further details concerning these interfaces, and in particular of the operations they export;

### Interface 46 - *PersonalAppGUI*

Interface ID:	46		
Interface Name:	PersonalAppGUI		
Purpose of the Interface	This interface is actually a modelling device to capture the operations that the user can perform on the TC PA; As such, the items in this interface are not intended to be implemented methods (though they ultimately correspond to some code), but, rather, actions performed by the user on the PA GUI;		
Requestors:	TC PA user (traveller)		
Preconditions:	All actions grouped in this interface require that the user is logged in the application, aside from <i>createUserGUI</i> and <i>loginUserGUI</i> ;		
Postconditions:	The result of each action is the start of the corresponding interaction as described in Deliverable D5;2;		
Interface Name:	ManagePayloadI		
Purpose of the Interface	This interface collects the low-level operations, <i>GetPayload</i> and <i>UpdatePayload</i> , which are used to retrieve and update the payload on the embodiment of a token during the token validation process, as depicted in Deliverable D5;2;		
Requestors:	BT		
GetPayload			
Preconditions:	The embodiment has been presented to the BT validation module;		
Postconditions:	The payload of the token is returned;		
Request / Input			
Exceptions:			
Notes and Issues:			
UpdatePayload			

<b>Preconditions:</b>	The embodiment can be updated		
<b>Postconditions:</b>	The embodiment is updated		
<b>Request / Input</b>	updatedPayload	M	The new payload for the token
<b>Exceptions:</b>			
<b>Notes and Issues:</b>			

## 4.2.6 Business Analytics interfaces

### Interfaces for data collection

Name	Purpose
Interface 47 – Get_Master_DataI	This interface retrieves master data regarding transport operators from the Interoperability Framework;
Interface 48 – Get_Services_LocationI	This interface retrieves information concerning the services location;
Interface 49 – Get_Travel_DataI	This interface retrieves information for analysing travel data;
Interface 50 – BA_Cooperation_CEPI	This interface provides information on events' evaluation from Complex Event Processing engine;
Interface 51 –BA_cooperation_messagesI	This interface provides information on all messages that were sent to the Travel Companion to be displayed to a customer, with a set of related information
Interface 52 – BA_cooperation_alternativesI	In case of travel plan reallocation, this interface retrieves information for at least any indication, whether some alternatives were offered to the customer or not;
Interface 53 – Get_Travel_InformationI	This interface retrieves travel information from external data providers
Interface 54 – Get_Social_InformationI	This interface retrieves messages from social network platforms

### Interface 47 - *Get\_Master\_Data*

<b>Interface ID:</b>	47		
<b>Interface Name:</b>	Get_Master_Data		
<b>Purpose of the Interface</b>	This interface retrieves master data regarding transport operators from the Interoperability Framework;		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Interoperability Framework		
<b>Description:</b>	This interface retrieves master data regarding transport operators from the Interoperability Framework;		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	The Business Analytics has collected master data for analytics purpose		
<b>Request / Input</b>	Start StopPlace global ID	M	Id of the first Stop Place of a MetaTravelExpertEpisode
	End StopPlace global ID	M	Id of the last Stop Place of a MetaTravelExpertEpisode
<b>Response / Output</b>	TravelExpert descriptor	M	Descriptor that supplies offer items on the metaroute
<b>Exceptions:</b>	No exceptions		
<b>Notes and Issues:</b>	No specified		

**Interface 48 - *Get\_Services\_LocationI***

<b>Interface ID:</b>	48		
<b>Interface Name:</b>	Get_Services_LocationI		
<b>Purpose of the Interface</b>	This interface retrieves information concerning the services location;		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Interoperability Framework		
<b>Description:</b>	This interface retrieves information concerning the services location;		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	The Business Analytics can invoke the interfaces exposed by the other IT2Rail work packages;		
<b>Request / Input</b>	serviceName	1	The service name to invoke
<b>Response / Output</b>	serviceLocation	1	Current service URI
<b>Exceptions:</b>	No exceptions		
<b>Notes and Issues:</b>	No specified		

### Interface 49 - *Get\_Travel\_Data*

<b>Interface ID:</b>	49		
<b>Interface Name:</b>	Get_Travel_Data		
<b>Purpose of the Interface</b>	This interface retrieves information for analysing travel data;		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Booking & Ticketing		
<b>Description:</b>	This interface retrieves information for analysing travel data		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	The Business Analytics platform can correlate this information with other data related to the travel and transport domains; Finally a series of KPIs can be computed on the basis of user's requests;		
<b>Request / Input</b>	startPeriod	1	Initial date of the time window
	endPeriod	1	Final date of the time window
	travelFilter	1	Filter travels of interest (city, transport mode, etc;)
<b>Response / Output</b>	travelData	0;;n	List of data concerning travels taking place during the input time window
<b>Exceptions:</b>	No exceptions		
<b>Notes and Issues:</b>	No specified		

### Interface 50 - BA\_Cooperation\_CEPI

<b>Interface ID:</b>	50		
<b>Interface Name:</b>	BA_Cooperation_CEPI		
<b>Purpose of the Interface</b>	This interface provides information on events' evaluation from Complex Event Processing engine; One event may have different impacts to different customers; For each couple event-customer, three different impact levels and appropriate message types are expected to be distinguished in WP4;		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Trip Tracking		
<b>Description:</b>	This interface provides information on events' evaluation from Complex Event Processing engine; One event may have different impacts to different customers; For each couple event-customer, three different impact levels and appropriate message types are expected to be distinguished in WP4;		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	Information on events is provided in an aggregated format and indicates the number of travellers affected by a specific event; The total number of events evaluated in the queried period shall be available;		
<b>Request / Input</b>	No input	-	-
<b>Response / Output</b>	Event ID	M	Unique event identifier inside IT2Rail domain;
	Impact level	M	This parameter specifies the impact level linked to the event;
	Number of customers	M	Customers that have been affected by the event with the appropriate impact;
<b>Exceptions:</b>	No exceptions;		
<b>Notes and Issues:</b>	No specified;		

### Interface 51 - BA\_cooperation\_messagesl

<b>Interface ID:</b>	51		
<b>Interface Name:</b>	BA_cooperation_messagesl		
<b>Purpose of the Interface</b>	This interface provides information on all messages that were sent to the Travel Companion to be displayed to a customer, with a set of related information, including a link to the causal event (where appropriate);		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Trip Tracking		
<b>Description:</b>	This interface provides information on all messages that were sent to the Travel Companion to be displayed to a customer, with a set of related information, including a link to the causal event (where appropriate);		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	Information on events is provided in an aggregated format and indicate the number of travellers affected by a specific event; The total number of events evaluated in the queried period shall be available;		
<b>Request / Input</b>	No input	-	-
<b>Response / Output</b>	Message ID	M	Unique message identifier inside the Trip Tracker
	Event ID	M	Event, which was the cause of the message
	Travel ID	M	Traveller, who receives the message (unique identifier inside IT2Rail domain)
	Message Type	M	This field in fact indicates the severity of an event impacting on traveller's journey;
	Processing Time	M	The interval between capturing the event and sending the message
<b>Exceptions:</b>	No exceptions;		
<b>Notes and Issues:</b>	No specified;		

### Interface 52 - BA\_cooperation\_alternativesI

<b>Interface ID:</b>	52		
<b>Interface Name:</b>	BA_cooperation_alternativesI		
<b>Purpose of the Interface</b>	In order to compute statistics related to proposed travel plan reallocation for each customer and all required aggregations (by customer, by transport/service provider, by time, and so on), the IT2Rail Business Analytics requires to get at least any indication, whether some alternatives were offered to the customer or not;		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Trip Tracking		
<b>Description:</b>	In order to compute statistics related to proposed travel plan reallocation for each customer and all required aggregations (by customer, by transport/service provider, by time, and so on), the IT2Rail Business Analytics requires to get at least any indication, whether some alternatives were offered to the customer or not		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	Business Analytics collects information on alternatives offered upon customer's request		
<b>Request / Input</b>	No input	-	-
<b>Response / Output</b>	Message ID	M	Message, which invoked the request for alternatives;
	Travel ID	M	Traveller requesting alternatives;
	Number of proposed alternatives:	M	This field specifies the amount of alternatives proposed to the traveller
	Processing Time	M	The interval between the request is received and alternatives are proposed to the traveller;
<b>Exceptions:</b>	No exceptions;		
<b>Notes and Issues:</b>	No specified;		

### Interface 53 - *Get\_Travel\_InformationI*

<b>Interface ID:</b>	53		
<b>Interface Name:</b>	Get_Travel_InformationI		
<b>Purpose of the Interface</b>	This interface retrieves travel information from external data providers		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Data Provider		
<b>Description:</b>	This interface retrieves travel information from external data providers		
<b>Preconditions:</b>	No preconditions		
<b>Postconditions:</b>	The Business Analytics collects information on travel and transport domains from external data sources;		
<b>Request / Input</b>	startPeriod	1	Initial date of the time window
	endPeriod	1	Final date of the time window
	travelFilter	1	Filter travels of interest (city, transport mode, etc;)
<b>Response / Output</b>	travelInfo	0;;n	List of information concerning travels taking place during the input time window
<b>Exceptions:</b>	No exceptions;		
<b>Notes and Issues:</b>	No specified;		

**Interface 54 - Get\_Social\_InformationI**

<b>Interface ID:</b>	54		
<b>Interface Name:</b>	Get_Social_InformationI		
<b>Purpose of the Interface</b>	This interface retrieves messages from social network platforms		
<b>Requestor:</b>	Business Analytics		
<b>Provider</b>	Social network		
<b>Description:</b>	This interface retrieves messages from social network platforms; All crawled messages are related with some topics specified by experts;		
<b>Preconditions:</b>	Authorization key and security key in order to access to third party APIs; Specify the related topics used to crawl data from the social network;		
<b>Postconditions:</b>	The Business Analytics collects messages from social network platforms;		
<b>Request / Input</b>	startPeriod endPeriod topic	1 1 0;;1	Initial date of the time window Final date of the time window Filter messages of interest (i.e; keywords)
<b>Response / Output</b>	Res	0;;n	List of messages sent during the input time window
<b>Exceptions:</b>	No exceptions;		
<b>Notes and Issues:</b>	No specified;		

#### 4.2.7 Interface provided by Business Analytics

Name	Purpose
<i>Interface 55 - Provide_Traveller_QuestionnaireI</i>	This interface collects answers of Traveller Questionnaires from the Travel Companion mobile app
<i>Interface 56 - BusinessAnalyticsServiceI</i>	This interface allows to provide information concerning specific KPIs, happenings and weather information, analysis of messages collected by social media;
<i>Interface 57 - Get_Itinerary_OffersI</i>	This interface receives itinerary offers computed by Travel Shopping;
<i>Interface 58 - Provide itinerary offers for BA computations</i>	The purpose of this interface is to provide itinerary offers to Business Analytics;

### Interface 55 - Provide\_Traveller\_Questionnaire

<b>Interface ID:</b>	55		
<b>Interface Name:</b>	Provide_Traveller_Questionnaire		
<b>Purpose of the Interface</b>	This interface collects answers of Traveller Questionnaires from the Travel Companion mobile app		
<b>Requestor:</b>	Traveller		
<b>Provider</b>	Business Analytics		
<b>Description:</b>	This interface collects answers of Traveller Questionnaires from the Travel Companion mobile app		
<b>Preconditions:</b>	-		
<b>Postconditions:</b>	The Business Analytics collects answers of Traveller Questionnaire from Travel Companion mobile app		
<b>Request / Input</b>	travelDate travelLeg meanOfTransportation userID userCommnet travelQuestions • question rate	1 1 1 1 0;;1 1;;n 1 1	Date and time of travel leg Travel leg Transport mean used Traveller's User Id Optional comment by the user Travel Questionnaire Question text Vote (1-5)
<b>Response / Output</b>	No Output	-	-
<b>Exceptions:</b>	No exceptions;		
<b>Notes and Issues:</b>	No specified;		

### Interface 56 - BusinessAnalyticsServiceI

Interface ID	56		
Interface Name	BusinessAnalyticsServiceI		
Purpose of the interface	This interface allows to provide information concerning specific KPIs, happenings and weather information, analysis of messages collected by social media;		
Requestor	Travel Companion		
Provider	Business Analytics		
Description	This interface allows to provide information concerning a specific KPI, happenings taking place in a specific city and weather information, summary information on messages collected by social media;		
Preconditions	A Traveller wants to visualize some business analytics or even useful information related to travel data		
Postconditions	The IT2Rail Business Analytics collects KPIs, happenings and weather data; then sends them to Travel Companion mobile app in order to show them to the IT2Rail user;		
GetBAKPIs			
Request / Input	kpi_names	1;;n	Names of required KPIs
Request / Output	Res	1;;n	Values of required KPIs
GetHappenings			
Request/Input	startPeriod	1	Initial date of the time window
	endPeriod	1	Final date of the time window
	Location	1	Place of interest
	• hasName	1	City name
Request / Output	Res	0;;n	List of happenings taking place in the required city during the input time window
GetWeatherInfo			
Request/Input	startPeriod	1	Initial date of the time window
	endPeriod	1	Final date of the time window
	Location	1	Place of interest
	• hasName	1	City name
Request / Output	weatherInfo	1;;n	List of weather information for the required city during the input time window
Exceptions	No exceptions;		
Notes and issues	No specified;		

### Interface 57 - Get\_Itinerary\_OffersI

<b>Interface ID</b>	57		
<b>Interface Name</b>	Get_Itinerary_OffersI		
<b>Purpose of the interface</b>	The purpose of this interface is to receive itinerary offers computed by Travel Shopping;		
<b>Requestor</b>	Travel Shopping		
<b>Provider</b>	Business Analytics		
<b>Description</b>	The purpose of this interface is to receive itinerary offers computed by the IT2Rail Travel Shopping;		
<b>Preconditions</b>	The Travel Shopping completed all its activities related to a mobility request; Itinerary offers were sent to Travel Companion after completing TS activities;		
<b>Postconditions</b>	The Business Analytics receives itinerary offers and starts its own computation;		
<b>Request/Input</b>	Itinerary offers / itineraries: ID 1 Amount 1 Note 0;;n Travel Episode 1;;n • Departure point 1 ▪ Label 1 ▪ Type 1 ▪ Reference ID 1 ▪ Geo code 1 ▪ Date 1 ▪ Time 1 • Arrival point 1 ▪ Label 1 ▪ Type 1 ▪ Reference ID 1 ▪ Geo code 1 ▪ Date 1 ▪ Time 1 • Mode 1 • Travel Expert 1 • Operator 1 • Transport ID 0;;1 • Class 1 • Carbon footprint 1 PRM information		List of Itinerary offers / itineraries ID of the itinerary Price associated to the travel solution Free text to give warning associate to itinerary List of segments composing the travel solution Departure point Name of the departure point Type of the point (AIR, Rail, bus station) Code associated (IATA code, ...) Latitude and longitude Departure date Departure time Arrival point Name of the arrival point Type of the point (AIR, Rail, bus station) Code associated (IATA code, ...) Latitude and longitude Arrival date Arrival time Transport mode Travel Expert which provides the info Operator of the segment (carrier, rail, ...) Flight number, train number, bus line Passenger class (first, business, economy, ...) Estimation of the segment footprint Information about PRM capabilities
<b>Request / Output</b>	No output	-	-
<b>Exceptions</b>	No exceptions;		
<b>Notes and issues</b>	No specified;
