

## 1. INTRODUCTION

---

The WP5 Software Component Pack is designed to ensure IT2Rail component-based development reusability. It details the separation of concerns with respect to the wide-ranging functionality available throughout the IT2Rail project.

It aims to bring about an equally wide-ranging degree of benefits in both the short-term and the long-term for the software itself and for the EU that sponsors such software.

Thus, components and interfaces are briefly described, according to the Conceptual Interface Specification document as well as the Conceptual Requirements Specification document, and their availability for future use is detailed:

- Availability of software with or without source code;
- Software sample for each component;
- Service Sample for each component.
